Consumer prices and price indexes

January-March 1991

Prix à la consommation et indices des prix

Janvier-mars 1991

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and the listed documents should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)
Montréal	(283-5725)	Edmonton	(495-3027)
Ottawa	(951-8116)	Calgary	(292-6717)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	1-800-563-4255
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinarlingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou tous les documents énumérés doivent être adressés à:

Sous-section de l'information et de l'analyse courante,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9606) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)
Montréal	(283-5725)	Edmonton	(495-3027)
Ottawa	(951-8116)	Calgary	(292-6717)
Toronto	(973-6586)	Vancouver	(666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, **aux utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- ^P preliminary figures.
- ^r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- **J. Arthur Ridgeway**, Assistant Director, Prices Division
- **Margaret Parlor**, Chief, Consumer Prices Section
- **Harold Harnarine**, Head, Information and Current Analysis Unit

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- ^P nombres provisoires.
- ^r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats Building, Ottawa, K1A 0T6.

Cette publication a été rédigée sous la direction de:

- **J. Arthur Ridgeway**, Directeur adjoint, Division des prix
- **Margaret Parlor**, Chef, Section des prix à la consommation
- **Harold Harnarine**, Chef, Sous-section de l'information et de l'analyse courante

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" - "Permanence of Paper for Printed Library Materials", ANSI Z39.48 - 1984.

Highlights

CONSUMER PRICE BEHAVIOUR

First Quarter, 1991

Trends in the All-items Index

Between December 1990 and March 1991 (first quarter, 1991), the All-items Consumer Price Index (CPI) for Canada increased by 3.0% in unadjusted terms. This was noticeably higher than the 1.3% rise observed in the period between September and December 1990 (fourth quarter, 1990). In seasonally adjusted terms, the All-items index advanced by 2.7% in the first quarter of 1991, much faster than the 1.6% increase posted in the fourth quarter of 1990. Virtually all of the increase in the first quarter of 1991 was concentrated in the month of January.

Most of the January increase was associated with changes in taxes, notably the introduction of the Goods and Services Tax (GST) and the elimination of the Federal Sales Tax (FST). At the same time, Québec lowered its provincial sales tax rate but expanded its tax base to include many items not previously taxed. As well, gasoline taxes, drivers' licences and vehicle registration fees were increased in several provinces. Assuming that all prices which contained FST were lowered to reflect its elimination, it is estimated that the net effect of all these tax-related changes would be to increase the unadjusted CPI by about 1.6% in the month of January.

Because of the sharp rise in the CPI level in January, the average of the 12-month rates in the first quarter of 1991, 6.4%, was conspicuously higher than the 4.9% rise in the last quarter of 1990. According to this measure (average of 12-month rates), the increase in the CPI declined steadily in the first three quarters of 1990. A turn-around in this trend occurred in the fourth quarter of 1990 and continued into the first quarter of 1991.

Major Contributors to the First Quarter Change

In unadjusted terms, six of the seven major component indexes registered increases ranging from 1.8% in the Housing index to 11.3% in the Tobacco Products and Alcoholic Beverages index. A fall of 2.9% in the Transportation index caused a moderate offsetting effect. The major upward pressures in the CPI resulted from increases of 10.2% in the Clothing index, 4.5% in the Food index, 11.3% in the Tobacco Products and Alcoholic Beverages index and 1.8% in the Housing index.

Major causes of the 10.2% rise in the Clothing index in the first quarter were the introduction of the GST and the extension of the tax base in Québec to include clothing. The end of winter sales in January and the introduction of the new spring lines of clothing also contributed to the relatively sharp rise in the index.

Faits saillants

COMPORTEMENT DES PRIX À LA CONSOMMATION

Premier trimestre, 1991

Tendances de l'indice d'ensemble

Entre décembre 1990 et mars 1991 (premier trimestre de 1991), l'indice d'ensemble non désaisonné des prix à la consommation (IPC) au Canada augmente de 3.0%, ce qui est nettement plus élevé que la hausse de 1.3% observée au trimestre précédent (entre septembre et décembre 1990). L'indice d'ensemble désaisonné progresse de 2.7% au premier trimestre de 1991, soit plus que le taux de 1.6% affiché au quatrième trimestre de 1990. La hausse notée au premier trimestre de 1991 survient surtout en janvier.

La hausse notée en janvier tient en grande partie à des changements fiscaux, comme l'entrée en vigueur de la taxe sur les produits et services (TPS) et la suppression de la taxe de vente fédérale (TVF). Pendant la même période, le Québec réduit sa taxe de vente provinciale, mais élargit son assiette fiscale pour y inclure beaucoup d'articles non taxés auparavant. Plusieurs provinces augmentent aussi les taxes sur l'essence, les droits de permis de conduire et les droits d'immatriculation. En supposant l'abaissement des prix par suite de la suppression de la TVF, on estime que tous ces changements fiscaux auraient pour effet net d'accroître l'IPC non désaisonné d'environ 1.6% en janvier.

Vu la très forte hausse de l'IPC en janvier, la moyenne des taux sur 12 mois au premier trimestre de 1991, soit 6.4%, est nettement supérieure à celle de 4.9% observée au dernier trimestre de 1990. D'après cette mesure (moyenne des taux sur 12 mois), la hausse de l'IPC ralentit progressivement aux trois premiers trimestres de 1990. La tendance est renversée au quatrième trimestre de 1990 et se poursuit au premier trimestre de 1991.

Principaux facteurs de la variation au premier trimestre

Des sept principales composantes de l'indice non désaisonné, six enregistrent une croissance allant de 1.8% pour l'habitation à 11.3% pour les produits du tabac et les boissons alcoolisées. La chute de 2.9% de l'indice des transports exerce un effet compensatoire modéré. La tendance à la hausse de l'IPC est surtout attribuable à la progression des indices suivants : l'habillement, 10.2%; les aliments, 4.5%; les produits du tabac et les boissons alcoolisées, 11.3%; et l'habitation, 1.8%.

Les principales causes de la hausse de 10.2% de l'indice de l'habillement au premier trimestre sont l'instauration de la TPS et l'inclusion de l'habillement dans l'assiette fiscale au Québec. La hausse assez forte de l'indice s'explique aussi par les soldes de fin d'hiver en janvier et par la présentation des nouvelles collections du printemps.

The Food index rose by 4.5% in the first quarter of 1991. This comprised of increases of 3.1% in the index for Food Purchased from Stores and 7.6% in the index for Food Purchased from Restaurants. Tax changes had a minor impact on the former sub-component and a major impact on the latter. Much of the rise in the index of Food Purchased from Stores was due to a 28.2% increase in the Fresh Fruit index, largely resulting from December frost damage in the south-west United States. Price increases with a lesser impact were observed for soft drinks, fresh vegetables and selected dairy products. Lower prices for fresh pork and chicken had a moderate dampening effect.

The 11.3% rise in the Tobacco Products and Alcoholic Beverages index resulted from advances of 22.2% in the Tobacco Products index and 3.9% in the Alcoholic Beverages index. Much of the rise in the Tobacco Products index occurred in March when a 3 cent per cigarette increase in the Federal Excise tax as well as provincial tax increases in Newfoundland and British Columbia took effect. The rise in the Alcoholic Beverages index was attributable partly to tax increases and partly to hikes in manufacturers' prices.

The Housing index rose by 1.8% in the first quarter of 1991. Notable price increases occurred for electricity, natural gas, furniture, basic telephone services and hotel/motel accommodation. Both the Rented and Owned Accommodation indexes rose moderately. The latter reflected increased mortgage interest costs and repair and maintenance charges offset, partially, by lower homeowners' insurance premiums and a drop in house prices. Price declines were also registered for long distance telephone services and fuel oil.

A relatively small proportion of the overall rise in the CPI was traceable to increases of 3.8% in the Recreation, Reading and Education index and 4.5% in the Health and Personal Care index. In the former, much of the increase was due to higher prices for selected home-entertainment equipment, increases in fees and dues associated with the use of recreational facilities, higher quotations on packaged holiday trips, and higher prices for newspapers. In the latter, higher prices for selected personal care supplies and equipment and increased charges relating to hair washing and cutting services were largely responsible for the change.

A small proportion of the overall increase in the CPI was offset by a decline of 2.9% in the Transportation index. A large part of the decline was caused by a drop of 14.8% in gasoline prices. A fall of 3.3% in the prices of auto vehicles, traceable in part to tax changes and in part to the enhancement in manufacturers' rebates to consumers on some models, was also observed. The overall downward pressure was slowed to some extent by higher charges for vehicle maintenance and repair, parking services, auto insurance coverages and travel by public transportation within a city. Air fares also rose by 5.4%, some of which was attributable to seasonal increases. Drivers' licence renewal fees and vehicle registration fees rose sharply in January in the provinces of Prince Edward Island, Québec and British Columbia.

L'indice des aliments avance de 4.5% au premier trimestre de 1991, ce qui représente 3.1% pour les aliments achetés au magasin et 7.6% pour ceux achetés au restaurant. Les changements fiscaux ont un effet mineur sur le premier sous-groupe et un effet majeur sur le deuxième. La hausse de l'indice des aliments achetés au magasin s'explique en grande partie par le bond de 28.2% de l'indice des fruits frais, lequel est surtout attribuable aux dommages causés par le gel en décembre dans le sud-ouest des États-Unis. La hausse du prix des boissons gazeuses, des légumes frais et de certains produits laitiers a une incidence moindre et elle est atténuée modérément par la baisse du prix du porc et du poulet frais.

La montée de 11.3% de l'indice des produits du tabac et des boissons alcoolisées fait suite à la hausse de 22.2% observée pour les produits du tabac et de 3.9% pour les boissons alcoolisées. Dans le cas des produits du tabac, la hausse survient surtout en mars, lorsque la taxe d'accise fédérale augmente de 3 cents la cigarette et que le relèvement des taxes provinciales entre en vigueur à Terre-Neuve et en Colombie-Britannique. Dans le cas des boissons alcoolisées, l'augmentation est due en partie à la hausse des taxes et en partie à la hausse des prix de fabrication.

L'indice de l'habitation s'accroît de 1.8% au premier trimestre de 1991. On observe des hausses notables concernant l'électricité, le gaz naturel, les meubles, les services téléphoniques de base et les chambres d'hôtels ou de motels. Les indices des logements en location et en propriété augmentent modérément. Dans le dernier cas, la hausse des intérêts hypothécaires et des frais d'entretien et de réparations est effacée en partie par la baisse des primes d'assurance à la charge des propriétaires et par la chute du prix des maisons. On note aussi une baisse des tarifs des appels interurbains et du prix du mazout.

Une part relativement petite de la hausse globale de l'IPC peut être attribuée à l'augmentation de 3.8% de l'indice des loisirs, de la lecture et de la formation et de 4.5% de l'indice des soins de santé et des soins personnels. Dans le premier cas, la hausse s'explique surtout par le relèvement des prix de certains articles de matériel de divertissement au foyer et par l'augmentation des frais et des cotisations pour les activités de loisirs, des tarifs des voyages organisés, tout compris, et du prix des journaux. Dans le dernier cas, la variation est largement attribuable à la hausse du prix de certains produits et appareils de soins personnels et des services de coiffeur.

La hausse globale de l'IPC est compensée légèrement par la baisse de 2.9% de l'indice des transports, laquelle est surtout causée par la chute de 14.8% du prix de l'essence. On observe aussi une baisse de 3.3% du prix des véhicules automobiles, qui s'explique en partie par les changements fiscaux et en partie par de meilleurs rabais que les fabricants consentent aux acheteurs de certains modèles. La tendance globale à la baisse est ralentie en quelque sorte par la hausse des frais d'entretien et de réparations, des tarifs de stationnement, des primes d'assurance-automobile et du coût du transport public urbain. Les tarifs aériens augmentent aussi de 5.4%, en partie à cause des hausses saisonnières. Les droits de renouvellement des permis de conduire et les droits d'immatriculation s'accroissent très fortement en janvier à l'Île-du-Prince-Édouard, au Québec et en Colombie-Britannique.

Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, The Consumer Price Index, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagréé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

¹ Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

¹ La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

TABLEAU 2. Pouvoir d'achat du dollar à la consommation¹ (en cents), par rapport à 1986, 1982-1991

¹ For further explanation, see Appendix 2.
¹ Pour de plus amples renseignements, consulter l'appendice 2.

Update

Introduction

This note describes an updating of the analytical indexes of consumer prices based on different treatments of owned accommodation. The analytical series, which have previously been published for the period from 1982 to 1988, are here updated for the years 1989 to 1990.

Altogether there are six different analytical indexes for owned accommodation, based on variants of four different concepts, including the series used in the official Consumer Price Index (CPI). Indexes are also calculated for the higher level aggregates, Shelter, Housing, and All-items. Aside from their utility in providing a picture of how different approaches impact on the CPI series, the analytical indexes are useful for international comparisons. In particular, since the U.S. CPI is based on a rental equivalence approach, the analytical CPI based on the same approach would provide a comparison less affected by methodological differences than the official Canadian series. For similar reasons, one might use the analytical Canadian CPI based on the first variant of the money outlays approach for comparisons involving the United Kingdom.

The next section provides brief definitions of the concepts on which the analytical series are based. For more detailed descriptions of these concepts, and a discussion of the weighting and estimation of the analytical indexes, the reader should consult the original publication of these series.¹

Definition of Concepts

The **official concept** upon which the owned accommodation component of the CPI is based is one variant of the user cost approach. An index based on the official concept measures the changes in the cost of using a fixed stock of owned dwellings. It incorporates five main components: the replacement cost of that part of the dwelling that is assumed to be used up in the year in question, mortgage interest costs, property taxes, homeowners' insurance premiums and homeowners' repairs. Less important components include transaction charges (real estate commissions, legal fees, etc.), condominium charges and mortgage insurance.

Séries analytiques d'indices des prix à la consommation pour le logement en propriété

Mise à jour

Introduction

Dans les lignes qui suivent, le lecteur trouvera une mise à jour des indices analytiques des prix à la consommation fondés sur différentes méthodes de traitement du logement en propriété. Les séries analytiques publiées ici vont de 1989 à 1990, alors que les séries publiées auparavant allaient de 1982 à 1988.

Il y a en tout six indices analytiques distincts pour le logement en propriété fondés sur des variantes de quatre concepts différents, dont une série fondée sur le concept utilisé dans l'indice des prix à la consommation (IPC) officiel. Les indices sont également calculés pour des agrégats de niveau supérieur: logement, habitation et ensemble. En plus de permettre de brosser un tableau de la façon dont diverses approches influent sur les séries de l'IPC, les indices analytiques servent à effectuer des comparaisons au niveau international. Plus précisément, le fait de se servir d'un IPC canadien analytique fondé sur la même méthode de l'équivalence en valeur locative que l'IPC des États-Unis rend possible une comparaison où les divergences méthodologiques ont moins d'effet que si l'on procédait à la comparaison en se servant des séries officielles canadiennes. Pour des raisons similaires, on pourrait se servir de l'IPC canadien analytique fondé sur la première variante de la méthode des débours à des fins de comparaison avec le Royaume-Uni.

La prochaine section définit brièvement les concepts ayant servi à établir les séries analytiques. Pour une description plus détaillée de ces concepts et un exposé de la pondération et de l'estimation des indices analytiques eux-mêmes, le lecteur doit se reporter à la publication où ces séries ont paru pour la première fois.¹

Définition des concepts

Le **concept officiel** sur lequel repose la composante du logement en propriété de l'IPC officiel est une variante de la méthode du coût pour l'utilisateur. Un indice fondé sur le concept officiel mesure les changements dans le coût d'utilisation d'un stock fixe de logements en propriété. Ce concept comprend cinq composantes principales: le coût de remplacement de la partie du logement qui est censée avoir été "usée" durant l'année en question, les coûts d'intérêt hypothécaire, les impôts fonciers ainsi que les primes d'assurance et les réparations à la charge du propriétaire. Les autres coûts du logement en propriété comprennent les frais de transaction (frais de courtage, honoraires d'avocat et de notaire, etc.), les charges de copropriété et l'assurance-hypothèque.

¹ See the supplement to the October-December issue of *Consumer Prices and Price Indexes* (Catalogue 62-010) for 1985. That supplement was written by Andrew Baldwin of Prices Division. Enquiries concerning the analytical owned accommodation series should be addressed to the author of this update, Larry MacDonald, Central Research Section, Prices Division, 613-951-3355.

¹ Voir le supplément du numéro d'octobre-décembre 1985 de *Prix à la consommation et indices des prix* (n° 62-010 au catalogue). Ce supplément a été rédigé par Andrew Baldwin de la division des prix. Les demandes d'information concernant les séries analytiques pour le logement en propriété pourront être adressées à Larry MacDonald de la section centrale de recherche, division des prix, 613-951-3355, qui a effectué cette mise-à-jour.

An index based on the **rental equivalence concept** estimates changes in the cost of consuming the dwelling services of a fixed stock of owner-occupied homes by imputing the change in market rents on similar types of tenant-occupied dwellings. The landlord directly pays most of the expenses of a tenant-occupied dwelling, including property taxes, dwelling insurance, mortgage interest, transaction costs and most repairs. Therefore, the owned accommodation series based on a rental equivalence concept contains, in addition to the rent series, only two other components: one series representing the costs of tenants' repairs and the other representing the costs of tenants' insurance on personal property.

An index based on the **money outlays concept** measures the price-induced changes in the consumption-related cash outlays on owner-occupied homes. Imputed costs are excluded by definition, as are investment related cash outlays. Most of the components of the official owned accommodation index also represent cash disbursements; hence they are in scope under a money outlays concept. The major exception is an imputed item, replacement costs.

In this update, two variants of the money outlays concept are shown, one including and one excluding net equity payments. Net equity payments consist of downpayments on owner-occupied homes, plus the principal portion of loan repayments when those homes are purchased on credit, less sales of owner-occupied homes.

A series based on the **net purchase concept** measures changes in the current transaction prices for owned accommodation. Net purchases of owner-occupied dwellings consist of all purchases of new and existing owner-occupied dwellings by the target population less sales of such dwellings within the target population. Indexes based on two variants of the net purchase concept are shown here. The first index excludes mortgage interest costs. In the second index, the home purchase component is replaced by components for downpayments and discounted mortgage payments.

Amendments to the Methodology of the Analytical Index Series

In conformity with the methodology of the CPI, the 1986 basket has been introduced to the owned accommodation analytical series. The series with the 1986 basket are linked at December 1988 to the 1982 basket series rebased to 1986=100. In short, the analytical series are now calculated as chain indexes of the following form:

Un indice fondé sur le **concept de l'équivalence en valeur locative** permet de mesurer les variations dans le coût d'utilisation des services d'un stock fixe de logements occupés par leur propriétaire, en imputant la variation des loyers économiques de logements similaires occupés par des locataires. Le propriétaire d'un logement locatif paie directement la plupart des dépenses, y compris les impôts fonciers, l'assurance du logement, l'intérêt hypothécaire, les frais de transaction et la plupart des réparations. Par conséquent, la série du logement en propriété fondée sur le concept de l'équivalence en valeur locative comprend, outre la série du loyer, seulement deux autres composantes: les frais de réparation à la charge du locataire et l'assurance du locataire sur ses effets personnels.

Un indice fondé sur le **concept des débours** permet de mesurer les variations causées par les prix dans les débours qu'occasionne l'utilisation de logements occupés par leur propriétaire. Les coûts imputés sont exclus par définition, de même que les débours liés à des placements. La plupart des composantes de l'indice officiel du logement en propriété représentent aussi des débours monétaires; elles sont donc dans le champ du concept des débours. La principale exception est un élément imputé, à savoir le coût de remplacement.

Dans la présente mise à jour, deux variantes du concept des débours sont présentées, la première incluant les remboursements nets sur le capital et la deuxième excluant ces remboursements. Les remboursements nets sur le capital comprennent les paiements initiaux sur les logements occupés par leur propriétaire, plus la fraction des versements consacrée au remboursement du capital lorsque les logements sont achetés à crédit, moins les ventes de logements occupés par leur propriétaire.

Un indice fondé sur le **concept des achats nets** permet de mesurer les variations des prix de transaction courants pour le logement en propriété. Les achats nets de logements occupés par leur propriétaire englobent tous les achats, par la population-cible, de logements neufs et existants occupés par leur propriétaire, moins les ventes de tels logements par la population-cible. Les indices de deux variantes du concept des achats nets sont présentées ici. Le premier indice exclut l'intérêt hypothécaire. Dans le deuxième indice, la composante de l'achat de maisons est remplacée par les composantes des paiements initiaux et des versements hypothécaires actualisés.

Modifications à la méthodologie des séries analytiques d'indices

Conformément à la méthodologie de l'IPC, on a adopté le panier de 1986 dans le contexte des séries analytiques du logement en propriété. Les séries fondées sur le panier de 1986 sont enchaînées, à partir de décembre 1988, aux séries fondées sur le panier de 1982 calculées sur la nouvelle base de 1986=100. En résumé, les séries analytiques sont maintenant calculées comme des indices chaînes de la façon suivante:

$$P_{t/86}^{Ch} = P_{t/D88}^{86} * P_{D88/86}^{82}$$

where,

$P_{t/86}^{Ch}$ is a chain price index which compares prices in the given period, t, to prices in the base period, 1986;

$P_{t/D88}^{86}$ is a fixed-basket index, with a 1986 basket, which compares prices in the given period, t, to prices in the base period, December 1988;

$P_{D88/86}^{82}$ is a fixed-basket price index, with a 1982 basket, which compares prices in December 1988 to prices in 1986.

$$P_{t/86}^{Ch} = P_{t/D88}^{86} * P_{D88/86}^{82}$$

où,

$P_{t/86}^{Ch}$ est un indice chaîne de prix qui compare les prix d'une période donnée (t) aux prix de la période de base (1986);

$P_{t/D88}^{86}$ est un indice de prix à panier fixe (panier de 1986) qui compare les prix d'une période donnée (t) à ceux de la période de base (décembre 1988);

$P_{D88/86}^{82}$ est un indice de prix à panier fixe (panier de 1982) qui compare les prix de décembre 1988 à ceux de 1986.

The updating of the basket reference period was accompanied by refinements in the calculation of weights for the rental equivalence and money outlay series. The methodology for the net purchase weights remains the same; a description can be found in the October-December 1985 issue of this publication.

In the rental equivalence series, value weights are required for three components: i) equivalent rent, ii) repairs and maintenance, and iii) homeowner insurance premiums. For the first component, the weights are based on responses to the 1986 Survey of Family Expenditures question: "If someone were to rent your home today, how much do you think it would rent for monthly, [without furniture and utilities]". After annualizing the quoted rents, averages for the urban-centre strata were calculated using quantity weights from the 1986 Census tallies related to owner-occupied dwellings for five house structure classes: single-detached, single-attached, duplex, other apartment, and movable dwelling. For the second and third components above, ii) repairs and maintenance and iii) homeowner insurance premiums, the expenditure weights were based on average expenditures by tenant households, weighted by structure type.

The changes to the weight methodology in the money outlay series involved three components: i) sale of home, ii) downpayments and iii) mortgage principal payments. The urban-centre strata weights for the first component were based on an average value of house sales reported in the 1986 and 1982 Family Expenditure Surveys, after adjusting the latter to 1986 prices. The urban-centre strata weights for the second component, downpayments, were devised from a 1986 national downpayment-to-purchase ratio and the

Outre la mise à jour de la période de référence du panier, on a ajusté les calculs des poids des séries de l'équivalence en valeur locative et des débours. La méthodologie ayant trait au poids des achats nets ne change pas; elle est décrite dans le numéro d'octobre-décembre 1985 de la présente publication.

Dans la série de l'équivalence en valeur locative, il faut établir la valeur des poids de trois composantes: i) le loyer équivalent, ii) les frais de réparations et d'entretien, et iii) les primes d'assurance à la charge du propriétaire. Pour ce qui est de la première composante, les poids sont fondés sur les réponses à la question suivante de l'enquête de 1986 sur les dépenses des familles: "Si vous donniez votre logement en location aujourd'hui, à combien s'élèverait le loyer mensuel selon vous, meubles et services publics non compris?". En ce qui a trait à la strate de centres urbains, après avoir annualisé les loyers relevés, on calcule les moyennes au moyen de poids quantitatifs tirés des chiffres du recensement de 1986 se rapportant aux logements occupés par leur propriétaire pour cinq catégories d'habitation: maison individuelle, maison individuelle attenante, maison à deux logements, autres appartements et logements mobiles. Pour ce qui est de la deuxième et de la troisième composante ci-dessus, ii) frais de réparations et d'entretien et iii) primes d'assurance à la charge du propriétaire, les poids des dépenses sont fondés sur les dépenses moyennes des ménages locataires, pondérés selon le type d'habitation.

Les modifications à la méthodologie de pondération des séries des débours touchent trois composantes: i) la vente de la maison, ii) les paiements initiaux et iii) les paiements du capital hypothécaire. Dans le cas des strates de centres urbains, les poids de la première composante sont fondés sur la valeur moyenne des ventes de maisons déclarées en 1986 et en 1982, dans le contexte de l'enquête sur les dépenses des familles (les chiffres de 1982 ont été ajustés en fonction des prix de 1986). Pour ce qui est de la strate des centres urbains, les poids pour la deuxième composante, celles des

average value of house purchases reported in the 1986 and 1982 Family Expenditure Surveys, revalued to 1986 prices. The weights for the third component, mortgage principal payments, were calculated by summing up differences in mortgage debt outstanding at the end and beginning of 1986, and adjusting for the purchase and selling of houses during 1986. Positive changes in mortgage principal outstanding due to renegotiation of a loan for a higher amount were treated as zero changes in deriving these estimates.

Update on the Movement of the Analytical Index Series

Text Tables II, III, IV, and V contain 1986 to 1990 analytical chain price indexes for four respective aggregation levels: owned accommodation, shelter, housing and All-items. Figure 1 contains a graph of the analytical series for owned accommodation.

For the first three years, 1986 to 1988, the indexes differ from concurrent indexes presented in previous updates only in the change of time base from 1982=100 to 1986=100. As rebasing does not alter the rate of change, comments made on index movements in earlier updates² are still applicable and need not be repeated here. This update will therefore deal with index movements in 1989 and 1990, focusing on annual rates of change calculated by comparing the average of the twelve month indexes in one calendar year to the average from the previous year. These are shown in Text Table VI. This update will deal principally with the movements at the owned accommodation aggregation level.

Despite a 4% increase in mortgage rates (according to the Prices Division index of conventional mortgage rates), the year 1989 marked a continuation of the economic expansion which started in 1983. The New House Price Index (NHPI) rose by 13.6%, a rate of increase well above any experienced by the other constituent components of the owned accommodation series. Consequently, the net purchase indexes, substantially influenced by current house prices, form the upper boundary in the recorded annual rates of change. The variant including discounted mortgage payments got an extra boost from the rise in mortgage rates to register an 11.3% gain, compared to a 9.1% gain for the variant excluding interest rates.

² See *Consumer Prices and Price Indexes* (Catalogue 62-010) for July-September, 1986, January-March, 1988 and January-March, 1989

paiements initiaux, ont été établis à partir d'un ratio entre le paiement initial et la valeur de l'achat et la valeur moyenne des achats des maisons déclarés en 1986 et en 1982 dans le contexte de l'enquête sur les dépenses des familles (les chiffres de 1982 ont été réévalués en fonction des prix de 1986). Les poids pour la troisième composante, celle des paiements du capital hypothécaire, ont été calculés en additionnant les différences des valeurs de la dette hypothécaire non remboursée à la fin et au début de 1986 et en procédant à des ajustements pour l'achat et la vente de maisons en 1986. Les variations positives du capital hypothécaire non remboursé attribuables à la renégociation d'un prêt pour un montant plus élevé ont été traitées comme des variations nulles dans le calcul de ces estimations.

Mise à jour du mouvement des séries analytiques d'indices

Les tableaux explicatifs II, III, IV et V renferment des indices chaînes analytiques de prix pour la période allant de 1986 à 1990 et ce, pour quatre niveaux d'agrégation respectifs: le logement en propriété, le logement, l'habitation et l'indice d'ensemble. La figure 1 renferme un graphique de la série analytique pour le logement en propriété.

Pour les trois premières années, de 1986 à 1988, la seule différence entre ces indices et ceux qui ont été présentés dans les mises à jour antérieures est le remplacement de l'année de base 1982=100 par 1986=100. Étant donné que cette nouvelle base ne modifie en rien le taux de variation, il n'est pas nécessaire de répéter les observations faites au sujet des mouvements des indices dans les mises à jour antérieures² car celles-ci sont toujours valables. Par conséquent, la présente mise à jour traite des mouvements des indices en 1989 et en 1990, en particulier des taux annuels de variation calculés en comparant la moyenne des indices de 12 mois d'une année civile à la moyenne de l'année précédente. Ces taux sont présentés au tableau explicatif VI. Cette mise à jour porte surtout sur les mouvements au niveau des agrégats du logement en propriété.

En dépit d'une hausse de 4% des taux hypothécaires (selon l'indice des taux hypothécaires conventionnels de la Division des prix), l'expansion économique amorcée en 1983 s'est poursuivie en 1989. L'indice des prix des logements neufs (IPLN) a augmenté de 13.6%, soit à un rythme de croissance qui dépasse de beaucoup ceux des autres composantes de la série du logement en propriété. Par conséquent, les indices des achats nets, sur lesquels les prix actuels des maisons influent considérablement, constituent l'échelon supérieur des taux annuels de variation enregistrés. La variante qui comprend les versements hypothécaires actualisés a subi une pression à la hausse additionnelle découlant de la montée des taux d'intérêt, et elle a augmenté de 11.3% comparativement à 9.1% dans le cas de la variante excluant les taux d'intérêt.

² Voir *Prix à la consommation et indices des prix* (n° 62-010 au catalogue) pour juillet-septembre, 1986, janvier-mars, 1988, et janvier-mars, 1989.

The rental equivalence index, which does not contain house price or interest rate components, forms the lower boundary at 4.9%. This rate, incidentally, is slightly less than the rate displayed by the rented accommodation index in the CPI. Differences between these two indexes often arise because of the use of different weighting patterns, the analytical weights being based on homeowner proportions per dwelling type and the CPI weights being based on renter proportions per dwelling type.

The three remaining indexes, the official and the two money outlay variants, lie grouped together at approximately the mid-point between the two boundaries. In these indexes, the impact of current house prices is moderated by the presence of lagged house prices and interest rates. The non-equity variant of the money outlays series rose by 7.5% while the equity variant rose by 6.7%, the slower rate of the latter being attributable to the additional drag of lagged house prices in one of its equity components. The official owned accommodation index turned out to be fractionally higher (7.6%) than the non-equity money outlay variant. This small difference is to be expected given that the only difference between the two indexes is the presence of replacement costs in the official series, and these costs rose virtually in line with the average of the other constituent indexes.

The year 1990 was a turning point for the Canadian economy. After mortgage rates escalated sharply in the first quarter, the Canadian economy went into recession for the last three quarters of 1990. House prices pursued a downward trend after March, reaching a December level which was 6.4% lower than the previous December level. The year 1990 illustrates how differences between the analytical owned accommodation series can vary from period to period, depending on underlying economic trends.

After showing the highest rates of increase in 1989, the net purchase variants show some of the lowest rates of increase in 1990: 3.4% and 5.6% for the first and second variants, respectively. A property tax increase of 7.3% kept these variants from posting even lower rates. Despite the relatively low 1990 growth rate of the net purchase series, the 1986-based index level for 1990 still exceeds the 1990 index levels of the other series. This is because of relatively stronger growth rates experienced by the net purchase series in the years since 1986.

The money outlay variants display the highest rates of increase in 1990. Fuelled by the steep rise in mortgage rates, the annual rate of increase in the money outlay variants accelerated to 8.3% for the variant excluding equity payments, and to 9.2% for the variant including these payments. The decline in the NHPI combined with the negative weight for the sale of home component helped to push the latter variant higher.

L'indice de l'équivalence en valeur locative, qui ne contient pas la composante du prix des maisons ou du taux d'intérêt, se situe à l'extrémité inférieure avec une hausse de 4.9%. Incidemment, ce taux est légèrement inférieur à celui de l'indice du logement en location de l'IPC. Il arrive souvent que l'on relève des écarts entre deux indices en raison de l'utilisation de modes de pondération différents, les poids analytiques étant fondés sur les pourcentages de propriétaires selon le type de logement et ceux de l'IPC étant fondés sur les pourcentages de locataires par type de logement.

Les trois autres indices, soit l'indice officiel et les deux variantes des débours, sont regroupés vers le milieu entre les deux extrêmes. Pour ce qui est de ces indices, les prix actuels des maisons subissent l'influence modératrice des prix des maisons et des taux d'intérêt décalés. La variante de la série des débours sans les remboursements sur le capital a augmenté de 7.5% tandis que la variante avec les remboursements sur le capital a progressé de 6.7%, le rythme de croissance plus lent de celle-ci étant attribuable à l'influence additionnelle des prix décalés des maisons dans l'une de ses composantes avec les remboursements sur le capital. L'indice officiel du logement en propriété n'était supérieur que d'une fraction (7.6%) à la variante des débours sans les remboursements sur le capital. On pouvait s'attendre à cet infime écart compte tenu du fait que la seule différence entre les deux indices est la présence de frais de remplacement dans les séries officielles dont la hausse a été virtuellement conforme à la moyenne des autres indices constituants.

L'année 1990 a marqué un point tournant pour l'économie canadienne. Après la brusque montée des taux d'intérêt pendant le premier trimestre de l'année, l'économie canadienne a connu une période de récession au cours des trois derniers trimestres de 1990. Les prix des maisons ont eu tendance à baisser après mars, s'établissant en décembre à un niveau inférieur de 6.4% à celui atteint en décembre 1989. L'année 1990 illustre la façon dont les divergences entre les séries analytiques du logement en propriété peuvent varier d'une période à l'autre, selon les tendances économiques sous-jacentes.

Après avoir connu les taux d'augmentation les plus élevés en 1989, les variantes des achats nets ont enregistré certains des taux de croissance les plus faibles en 1990: 3.4% et 5.6% pour la première et la deuxième variante respectivement. Les taux de ces variantes auraient pu être encore moins élevés n'eût été de la hausse de 7.3% de l'impôt foncier. En dépit du taux de croissance relativement faible des séries des achats nets en 1990, le niveau atteint en 1990 par l'indice dont l'année de base est 1986 dépasse tout de même les niveaux atteints par les indices des autres séries en 1990. Ce phénomène s'explique par les taux de croissance relativement plus forts des séries des achats nets dans les années postérieures à 1986.

Les variantes des débours ont enregistré les plus hauts taux d'augmentation en 1990. En raison de la forte hausse des taux hypothécaires, le taux annuel d'augmentation des variantes des débours s'établissait à 8.3% pour la variante excluant les paiements avec les remboursements sur le capital et à 9.2% pour celle qui inclue ces paiements. Le recul de l'IPLN, combiné au poids négatif de la composante de la vente de maisons, a contribué à l'accroissement de cette dernière variante.

The official owned accommodation index rose by 6.6%, a rate lower than the near equivalent non-equity money outlays index because of a slowdown in the replacement cost sub-index within the official series. Nevertheless, the official series still registered an increase above the rental equivalence series increase. The increase in the rental equivalence series, which was 3.4%, continues the pattern of modest and steady rates of increase under the 5% mark, as observed over the last four years.

If one examines the text tables for the higher level aggregations, it can be seen that the differences between the index series diminish as one goes to higher levels of aggregation. In 1989, the annual rates of change for the All-items CPI range from 4.6% using the rental equivalence series, to 5.3% using the net purchase series. In 1990, the range is from 4.2% for the CPI based on the rental equivalence and net purchase approaches, to 5.0% for the CPI based on one of the money outlays approaches. The All-items CPI based on the net purchase series shows relatively more volatility, primarily because of the greater sensitivity of its owned accommodation index to current changes in house prices and interest rates. For example, the All-items CPI based on the net purchase (excluding interest payments) series went from a 5.3% increase in 1989 to a 4.5% increase in 1990, in contrast to the All-items CPI based on the non-equity money outlays series, which went from 4.9% to 4.8% respectively.

L'indice officiel du logement en propriété a progressé de 6.6%, soit à un rythme inférieur à celui de l'indice presque équivalent des débours sans les remboursements sur le capital, ce qui s'explique par un ralentissement du sous-indice des frais de remplacement de la série officielle. Néanmoins, le taux d'augmentation de la série officielle est supérieur à la hausse des séries de l'équivalence en valeur locative. L'accroissement de 3.4% de la série de l'équivalence en valeur locative s'inscrit dans la norme des taux de croissance modestes et réguliers, inférieurs au niveau de 5% observé au cours des quatre dernières années.

L'étude des tableaux explicatifs au niveau d'agrégation supérieur révèle que plus le niveau d'agrégation est élevé, moins les écarts entre les séries d'indice sont importants. En 1989, les taux annuels de variation de l'IPC d'ensemble sont compris entre 4.6% pour les séries de l'équivalence en valeur locative et 5.3% pour les séries des achats nets. En 1990, la variation est comprise entre 4.2% pour l'IPC fondé sur l'équivalence en valeur locative et achats nets, et 5.0% pour l'IPC fondé sur l'une des approches des débours. L'IPC d'ensemble fondé sur les séries des achats nets est relativement plus instable, en raison surtout de la plus grande sensibilité de l'indice du logement en propriété aux variations courantes des prix des maisons et des taux d'intérêt. Par exemple, l'IPC d'ensemble fondé sur les séries des achats nets (excluant les versements d'intérêt) est passé d'une augmentation de 5.3% en 1989 à une hausse de 4.5% en 1990, à l'encontre de l'IPC d'ensemble fondé sur les séries des débours sans les remboursements sur le capital qui est passé de 4.9% à 4.8%.

¹ Annual rate calculated by comparing annual price indexes from two calendar years.¹ Le taux annuel est calculé en comparant les indices de prix annuels de deux années civiles.

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE VII. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF VII. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1982	Weights 1986
Composantes principales	Pondérations 1982	Pondérations 1986
All-items - Ensemble	100.00¹	100.00¹
Food - Aliments	20.02	18.05
Housing - Habitation	38.14	36.32
Clothing - Habillement	8.37	8.69
Transportation - Transports	15.75	18.29
Health and personal care - Santé et soins personnels	4.02	4.20
Recreation, reading and education - Loisirs, lecture et formation	8.25	8.84
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.45	5.60

¹ Figures may not add up due to rounding.

¹ Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table VII represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Les pondérations du tableau explicatif VII représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1986=100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1986=100 time base became effective with the release of the June 1990 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised periodically.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1981=100 or 1986=100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1986=100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1981 or 1986 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1986=100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1986=100 est devenue effective à partir de la diffusion de l'indice de juin 1990. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision périodiquement.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1981=100 et 1986=100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1986=100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1981 ou 1986) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in **Family Expenditure in Canada, 1986**, Catalogue 62-555.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans **Dépenses des familles au Canada, 1986**, n° 62-555 au catalogue.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1986 and June 1990, consumer prices as measured by the CPI rose 19.2% such that, goods and services which could have been purchased for \$100.00 in 1986 would cost \$119.20 in June 1990. Each consumer dollar in June 1990 therefore buys less than in 1986. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in June 1990 compared to the 1986

$$\text{dollar was } 83.9 \text{ (100 cents } \times \frac{100.0}{119.2} = 83.9 \text{ cents).}$$

This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1986 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1986 et juin 1990, les prix à la consommation mesurés par l'IPC ont grimpé de 19.2% de sorte que les biens et services qu'on pouvait acheter en 1986 avec \$100.00 coûtaient \$119.20 en juin 1990. Chaque dollar de consommation en juin 1990 achète donc moins qu'en 1986. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en juin 1990, par rapport au dollar de 1986,

$$\text{s'établissait à } 83.9 \text{ cents (100 cents } \times \frac{100.0}{119.2} = 83.9 \text{ cents).}$$

Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1986 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

The methodologies used for removing as much of the seasonal fluctuation as possible from a series have been described in detail in numerous articles and texts on the subject.¹ Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

¹ Shiskin, Julius and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question¹. Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fut changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. étant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is under taken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally under taken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The goods and services tax (GST) and the provincial retail sales tax are included in the retail averages where applicable.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe sur les produits et services (TPS) et la taxe de vente au détail sont ajoutées au prix de détail moyen s'il y a lieu.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendix 5

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these items by means of benefits separate from those regulated by statistical means. Finally, government

Appendice 5

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que

employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking an other complete survey.

statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources de données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistics Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8
Clothing and home furnishings	22
Transportation and automobile operation	22
Health and personal care	25
Reading and recreation	13
Tobacco and alcohol	12

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

Groupe principal de produits	Nombre d'articles dont le prix est relevé (lorsque disponibles)
Aliments consommés à la maison	104
Repas pris à l'extérieur	9
Entretien et services ménagers	11
Fournitures ménagères	8
Communication	3
Aide-domestique (dépendant de l'endroit)	2-8
Habillement et ameublement	22
Transports et utilisation de l'automobile	22
Santé et soins personnels	25
Lecture et loisirs	13
Tabacs et boissons alcoolisées	12

No other monthly report on the Canadian Economy has this much to offer

La seule publication à vous offrir autant d'information sur l'économie canadienne

Canadian Economic Observer

The most extensive and timely information source for people who want objective facts and analysis on the Canadian Economy... every month.

Current economic conditions

Brief, "to the point" a current update summary of the economy's performance including trend analyses on employment, output, demand and the leading indicator.

Feature articles

In-depth research on current business and economic issues: business cycles, employment trends, personal savings, business investment plans and corporate concentration.

Statistical summary

National tables, charts and graphs cover national accounts, output, demand, trade, labour and financial markets.

Regional analysis

Provincial breakdowns of key economic indicators.

International overview

Digest of economic performance of Canada's most important trading partners — Europe, Japan and the U.S.

Economic and statistical events

Each month, CEO also publishes a chronology of current events that will affect the economy, and information notes about new products from Statistics Canada.

Consult with an expert

The names and phone numbers of the most appropriate Statistics Canada contacts are provided with each data table in the statistical summary; not only can you read the data and the analysis, you can talk to the experts about it.

The Canadian Economic Observer

(Catalogue no. 11-010) is \$220 annually in Canada, US\$260 in the United States and US\$310 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

For faster service, fax your order to 1-613-951-1584. Or call toll free at 1-800-267-6677 and use your VISA or MasterCard.

L'Observateur économique canadien

La revue la plus complète et la plus à jour qui soit pour les gens qui désirent des renseignements objectifs et une analyse de l'économie canadienne... chaque mois.

Les conditions économiques actuelles

Résumé bref et incisif de l'actualité économique du mois, comportant l'analyse des tendances de l'emploi, de la production, de la demande et de l'indicateur avancé.

Les études spéciales

Recherche approfondie sur les questions du domaine des affaires et de l'économie : cycles économiques, tendances de l'emploi, épargne personnelle, projets d'investissement et concentration des sociétés.

L'aperçu statistique

Tableaux, graphiques et diagrammes englobant les statistiques des comptes nationaux, de la production, de la demande, du commerce, de l'emploi et des marchés financiers.

L'analyse régionale

Ventilation par province des indicateurs économiques stratégiques.

Le survol de l'économie internationale

Un sommaire du rendement de l'économie des partenaires commerciaux du Canada, comme l'Europe, le Japon et les États-Unis.

Événements économiques et statistiques

Chaque mois, L'OEC publie une chronologie des événements qui influenceront l'économie de même que des renseignements sur les nouveaux produits de Statistique Canada.

Consultez un expert

Les noms et numéros de téléphone des personnes-ressources figurent à chaque tableau de l'aperçu statistique; non seulement pouvez-vous lire les données et l'analyse, mais vous pouvez de plus discuter du sujet avec les experts de Statistique Canada.

L'Observateur économique canadien.

(n° 11-010 au catalogue) coûte 220 \$ l'abonnement annuel au Canada, 260 \$ US aux États-Unis et 310 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

What happened to the cost of living last month?

The Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), **The Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- food
- clothing
- housing
- health and personal care
- recreation, reading and education
- tobacco products and alcoholic beverages

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of change.

Get the facts.

Subscribe to **The Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$93 in Canada, US\$112 in the United States and US\$130 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Qu'en était-il du coût de la vie le mois dernier ?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur:

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changement.

Abonnez-vous !

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 93 \$ au Canada, 112 \$ US aux États-Unis et 130 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

1-800-267-6677

How long would it take you to get 10,000 price quotes from 3,500 companies?

A lot longer than it takes to open a copy of **Industry Price Indexes**. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

Industry Price Indexes are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from fish fillets to industrial furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$182 in Canada, US\$218 in the United States and US\$255 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Combien de temps vous faudrait-il pour obtenir 10 000 propositions de prix de 3 500 compagnies ?

Beaucoup plus de temps qu'il n'en faut pour lire un exemplaire d'**Indices des prix de l'industrie**. Abonnez-vous dès maintenant afin d'avoir accès aux données les plus complètes possible sur les prix de vente des manufacturiers canadiens.

Indices des prix de l'industrie est indispensable si vous avez besoin de rapports à jour, uniformes et fiables au sujet des fluctuations des prix à la production au Canada. Ces indices peuvent servir notamment à préparer des contrats d'indexation, à gérer des stocks, à suivre des tendances au moyen de graphiques, à prévoir des fluctuations de prix ou à compiler des données pour concevoir votre propre indice.

Cette publication mensuelle porte sur les matières premières, l'énergie et plus de 700 produits classés dans 20 grandes catégories. Les articles répertoriés vont des filets de poisson aux fours industriels en passant par les bovins et le pétrole brut. Pour la plupart des produits, les statistiques ont une portée nationale; toutefois, pour certains, elles revêtent un caractère régional.

Chaque numéro donne également une perspective historique; des tableaux indiquent les moyennes annuelles et les indices des prix mensuels des produits au cours des cinq dernières années.

Indices des prix de l'industrie est le seul périodique aussi complet et détaillé. Il fait autorité en ce qui touche les fluctuations des prix de vente des marchandises fabriquées au Canada.

Abonnez-vous !

L'abonnement au mensuel **Indices des prix de l'industrie** (n° 62-011 au catalogue) coûte 182 \$ au Canada, 218 \$ US aux États-Unis et 255 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

Prix à la consommation et indices des prix

Avril-juin 1991

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and the listed documents should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou tous les documents énumérés doivent être adressées à:

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- ^P preliminary figures.
- ^r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- **Michel Jacod**, Director, Prices Division
- **François Bordé**, Chief, Consumer Prices Section
- **Harold Harnarine**, Head, Information and Current Analysis Unit

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- ^P nombres provisoires.
- ^r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats Building, Ottawa, K1A 0T6.

Cette publication a été rédigée sous la direction de:

- **Michel Jacod**, Directeur, Division des prix
- **François Bordé**, Chef, Section des prix à la consommation
- **Harold Harnarine**, Chef, Sous-section de l'information et de l'analyse courante

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" – "Permanence of Paper for Printed Library Materials", ANSI Z39.48 – 1984.

Highlights

CONSUMER PRICE BEHAVIOUR

Second Quarter, 1991

Trends in the All-items Index

Between March and June 1991 (second quarter) the All-items Consumer Price Index (CPI) for Canada rose by 0.7% in seasonally adjusted terms, a much slower rate of increase than the 2.7% registered in the first quarter of 1991. During the second quarter, the All-items index accelerated steadily (April, 0.1%; May, 0.2%; June, 0.4%).

In unadjusted terms, the CPI increased by 1.0% in the second quarter. This rise was considerably smaller than the 3.0% advance registered in the period between December 1990 and March 1991 (first quarter). The sharp rise in the first quarter was influenced, to a large extent, by the introduction of the Federal Goods and Services Tax in January 1991.

The average of 12-month rates of increase in the second quarter 1991 was 6.3% compared to 6.4% registered in the first quarter. These rates were noticeably higher than the 4.8% annual increase for 1990. The sharp increase in 1991 resulted mainly from the sudden jump in the CPI in January owing to the introduction of the Goods and Services Tax.

Major Contributors to the Second Quarter Change

In unadjusted terms, four of the major component indexes registered increases in the second quarter, two fell and one remained unchanged. Changes in the major component indexes fluctuated between a decline of 0.5% in the Clothing index to a rise of 4.5% in the Tobacco Products and Alcoholic Beverages index. The major sources of upward pressures in the All-items index resulted from increases of 2.5% in the Food index, 4.5% in the Tobacco Products and Alcoholic Beverages index and 0.7% in the Housing index.

The 2.5% rise in the Food index in the second quarter resulted from increases of 3.2% in the Food Purchased from Stores index and 0.7% in the Food Purchased from Restaurants index. The impact of the rise in the former outweighed, by far, the contribution of the latter. Much of the rise in the Food Purchased from Stores index occurred in the month of June. The dominant factor was a sharp rise in the Fresh Vegetables index. Prices of salad type vegetables advanced rapidly as heavy rains in Florida affected tomato shipments to Canada and earlier weather problems in California disrupted the lettuce market. The prices of storage-type vegetables such as potatoes, onions and carrots also registered sharp price increases, much of which was traceable to seasonal stock depletion followed by higher prices of imports. Some small, additional upward pressure on the Food index resulted from higher prices for fresh fruit (mostly for apples) pork and fish. The overall rise was dampened to some extent by lower prices for beef, chicken, low fat milk, selected bakery products, sugar and carbonated beverages.

Faits saillants

COMPORTEMENT DES PRIX À LA CONSOMMATION

Deuxième trimestre, 1991

Tendances de l'indice d'ensemble

Entre mars et juin 1991 (deuxième trimestre), l'indice d'ensemble désaisonnalisé des prix à la consommation (IPC) au Canada augmente de 0.7%, soit à un rythme bien inférieur à celui de 2.7% enregistré au premier trimestre de 1991. Au deuxième trimestre, l'indice d'ensemble s'accroît progressivement (de 0.1% en avril, 0.2% en mai et 0.4% en juin).

L'indice d'ensemble non-désaisonnalisé augmente de 1.0% au deuxième trimestre. Cette hausse est considérablement inférieure à celle de 3.0% enregistrée pendant la période allant de décembre 1990 à mars 1991 (premier trimestre). La forte poussée du premier trimestre est en majeure partie attribuable à l'adoption de la taxe fédérale sur les biens et services en janvier 1991.

La moyenne des taux sur 12 mois au deuxième trimestre de 1991 est de 6.3% comparativement à 6.4% au premier trimestre. Ces taux sont sensiblement supérieurs à la progression annuelle de 4.8% observée en 1990. La forte hausse de 1991 s'explique surtout par la soudaine majoration de l'IPC en janvier, attribuable à l'adoption de la taxe sur les biens et services.

Principaux facteurs de la variation au deuxième trimestre

Quatre des principales composantes de l'indice non désaisonnalisé augmentent au deuxième trimestre, deux diminuent et une demeure inchangée. Les mouvements des indices des principales composantes sont compris entre un recul de 0.5% de l'indice de l'habillement et une poussée de 4.5% de l'indice des produits du tabac et des boissons alcoolisées. Les pressions à la hausse exercées sur l'indice d'ensemble découlent surtout des augmentations de 2.5% de l'indice des aliments, de 4.5% de l'indice des produits du tabac et des boissons alcoolisées et de 0.7% de l'indice de l'habitation.

Le relèvement de 2.5% de l'indice des aliments au deuxième trimestre découle de la progression de 3.2% des aliments achetés au magasin et de 0.7% des aliments achetés au restaurant. Le gain de la première de ces composantes est bien supérieure à celui de la deuxième. L'accroissement de l'indice des aliments achetés au magasin est en majeure partie survenu en juin. Le facteur dominant est la forte hausse de l'indice des légumes frais. Le prix des légumes utilisés dans les salades progresse rapidement, de fortes pluies en Floride ayant retardé les livraisons de tomates au Canada et des problèmes antérieurs attribuables à la température en Californie ayant désorganisé le marché de la laitue. Le prix des légumes destinés à l'entreposage, comme les pommes de terre, les oignons et les carottes, subit également une forte hausse, en majeure attribuable à l'épuisement saisonnier des stocks suivi d'une hausse du prix des importations. Le relèvement du prix des fruits frais (surtout des pommes), du porc et du poisson exerce une pression à la hausse additionnelle, quoique restreinte, sur l'indice des aliments. L'augmentation globale est compensée, dans une certaine mesure, par le recul du prix du boeuf, du poulet, du lait à basse teneur en gras, de certains produits de boulangerie, du sucre et des boissons gazeuses.

The 4.5% rise in the Tobacco Products and Alcoholic Beverages index ranked second in importance in terms of contributing positively to the latest quarterly change in the CPI. The Tobacco Products sub-component rose by 7.8% and accounted for three-quarters of the change in the major component index. At the same time the Alcoholic Beverages index increased by 1.9%. Much of the rise in the Tobacco Products index resulted from provincial tax increases. Provincial taxes on cigarettes rose in Prince Edward Island, New Brunswick and Saskatchewan in April, in Ontario and Québec in May and in Manitoba and British Columbia in June. Prices of alcoholic beverages purchased from stores rose by 2.7% while prices of served beverages were up by 0.6%. Much of the former was due to higher prices for beer and liquor found in most provinces.

The Housing index climbed by 0.7% in the second quarter. Much of the increase was traceable to higher charges for owned accommodation, rented accommodation and electricity. A major proportion of the increase in the Owned Accommodation index was due to higher prices for new houses followed, distantly, by increases in homeowners' insurance premiums. House prices fell continuously from May 1990 to March 1991. In the second quarter house prices rebounded, caused in part by the steady fall in mortgage interest rates since the summer of 1990. Electricity charges rose sharply in Québec in May. Other price increases were observed for travelling accommodation, basic telephone services, pet food, detergent and soap, horticultural goods, furniture and household textiles. Lower prices for fuel oil and piped gas provided a small moderating effect.

A rise of 1.1% in the Health and Personal Care index contributed marginally to the overall second quarter increase. Higher charges for dental care and for services relating to hair cutting and grooming were the main contributors to this increase.

The Recreation, Reading and Education index remained unchanged. Increases in packaged holiday quotations, in fees and dues for the use of recreational facilities and in the prices of reading material were offset completely by lower prices for selected recreational and home-entertainment equipment.

The Clothing index fell by 0.5% in the second quarter. This index rose in every month of the first quarter and then fell continuously in every month of the second quarter. Overall weak demand associated with widespread promotional activities explained the drop in prices in the latest period. The Women's Wear and Men's Wear indexes fell by 0.8% and 1.0% respectively.

The Transportation index also declined by 0.2% reflecting some significant offsetting price movements. Prices of new automobiles and trucks fell by an average of 1.8% mainly due to increases in manufacturers' price rebates and changes in other consumer incentives. Lower prices for tires were also observed. Air fares fell by 4.2% as lower seasonal rates on selected southern destinations came into effect and the quantity of "seat sales" offered on overseas flights was increased. A considerable proportion of this overall downward pressure was counterbalanced by higher prices for gasoline which rose in May and June following five months of continuous declines.

Par ordre d'importance, la montée de 4.5% de l'indice des produits du tabac et des boissons alcoolisées vient au deuxième rang des facteurs qui ont contribué à la récente hausse trimestrielle de l'IPC. La sous-composante des produits du tabac s'accroît de 7.8% et intervient pour les trois-quarts du mouvement de l'indice de la composante principale. Parallèlement, l'indice des boissons alcoolisées s'accroît de 1.9%. La majeure partie de la hausse de l'indice des produits du tabac découle de la majoration des taxes provinciales. En effet, on enregistre un relèvement de la taxe provinciale sur les cigarettes à l'île-du-Prince-Édouard, au Nouveau-Brunswick, et en Saskatchewan en avril, en Ontario et au Québec en mai et au Manitoba et en Colombie-Britannique en juin. Le prix des boissons alcoolisées achetées au magasin augmente de 2.7% tandis que celui des boissons consommées sur place monte de 0.6%. Dans le premier cas, la progression est en majeure partie attribuable à la hausse du prix de la bière et des spiritueux dans la plupart des provinces.

L'indice de l'habitation s'accroît de 0.7% au deuxième trimestre. Cette montée s'explique en majeure partie par le relèvement des frais liés au logement en propriété, au logement en location et aux tarifs d'électricité. La hausse de l'indice du logement en propriété est surtout due à l'augmentation du prix des maisons neuves, suivie, de loin, par l'accroissement des primes d'assurance des propriétaires de maison. Le prix des maisons ne cesse de diminuer de mai 1990 à mars 1991. Au deuxième trimestre, le prix des maisons rebondit, en partie à cause du repli soutenu des taux d'intérêt hypothécaire depuis l'été de 1990. Les frais d'électricité augmentent rapidement au Québec en mai. On observe d'autres hausses de prix au titre de l'hébergement des voyageurs, des services de téléphone de base, des aliments pour animaux, du détergent et du savon, des produits horticoles, des meubles et des articles ménagers en matière textile. Le recul du prix du mazout et du gaz naturel exerce un faible effet modérateur.

La hausse de 1.1% de l'indice de la santé et des produits de soins personnels ne contribue que dans une faible mesure à l'augmentation globale du deuxième trimestre. Le relèvement des frais dentaires et des services de coupe et de mise en pli sont les principaux facteurs de cette hausse.

L'indice des loisirs, de la lecture et de la formation demeure inchangé. L'accroissement du prix des voyages organisés tout compris, des frais et cotisations pour les activités de loisirs et du prix du matériel de lecture est entièrement compensé par la baisse du prix de certains articles de loisirs et de certains articles et services de divertissement au foyer.

L'indice de l'habillement diminue de 0.5% au deuxième trimestre. Au cours du premier trimestre, cet indice a augmenté chaque mois et, au deuxième trimestre, il a diminué chaque mois, de façon soutenue. La faiblesse de la demande globale, conjuguée à des activités promotionnelles d'envergure, explique le recul des prix au cours de la récente période. Les indices des vêtements pour femmes et pour hommes reculent respectivement de 0.8% et de 1.0%.

L'indice des transports se replie également de 0.2% à cause de certains mouvements de prix compensatoires importants. Le prix des automobiles et des camions neufs baisse en moyenne de 1.8%, en raison surtout des rabais accrus offerts par les fabricants et des modifications aux autres stimulants à la consommation. On observe en outre un recul du prix des pneus. Les tarifs aériens diminuent de 4.2% en raison de l'entrée en vigueur des tarifs saisonniers réduits pour certains vols à destination du sud et de la hausse des places offertes en solde sur des vols outre-mer. La pression à la baisse globale est neutralisée, dans une proportion considérable, par la majoration en mai et en juin, du prix de l'essence qui n'a cessé de diminuer au cours des cinq mois précédents.

Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, The Consumer Price Index, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagregé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

¹ Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

¹ La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principale de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1982	Weights 1986
Composantes principales	Pondérations 1982	Pondérations 1986
All-items - Ensemble	100.00¹	100.00¹
Food - Aliments	20.02	18.05
Housing - Habitation	38.14	36.32
Clothing - Habillement	8.37	8.69
Transportation - Transports	15.75	18.29
Health and personal care - Santé et soins personnels	4.02	4.20
Recreation, reading and education - Loisirs, lecture et formation	8.25	8.84
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.45	5.60

¹ Figures may not add up due to rounding.

¹ Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Les pondérations du tableau explicatif II représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1986=100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1986=100 time base became effective with the release of the June 1990 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised periodically.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1981=100 or 1986=100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1986=100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1981 or 1986 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1986=100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1986=100 est devenue effective à partir de la diffusion de l'indice de juin 1990. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision périodiquement.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1981=100 et 1986=100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1986=100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1981 ou 1986) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonné des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in *Family Expenditure in Canada, 1986*, Catalogue 62-555.

Whitehorse and Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982 = 100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans *Dépenses des familles au Canada, 1986*, n° 62-555 au catalogue.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1986 and June 1990, consumer prices as measured by the CPI rose 19.2% such that, goods and services which could have been purchased for \$100.00 in 1986 would cost \$119.20 in June 1990. Each consumer dollar in June 1990 therefore buys less than in 1986. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in June 1990 compared to the 1986

$$\text{dollar was } 83.9 \text{ (100 cents } \times \frac{100.0}{119.2} = 83.9 \text{ cents).}$$

This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1986 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1986 et juin 1990, les prix à la consommation mesurés par l'IPC ont grimpé de 19.2% de sorte que les biens et services qu'on pouvait acheter en 1986 avec \$100.00 coûtaient \$119.20 en juin 1990. Chaque dollar de consommation en juin 1990 achète donc moins qu'en 1986. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en juin 1990, par rapport au dollar de 1986,

$$\text{s'établissait à } 83.9 \text{ cents (100 cents } \times \frac{100.0}{119.2} = 83.9 \text{ cents).}$$

Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1986 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

The methodologies used for removing as much of the seasonal fluctuation as possible from a series have been described in detail in numerous articles and texts on the subject.¹ Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

¹ Shiskin, Julius and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question¹. Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fut changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. étant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is under taken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally under taken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The goods and services tax (GST) and the provincial retail sales tax are included in the retail averages where applicable.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe sur les produits et services (TPS) et la taxe de vente au détail sont ajoutées au prix de détail moyen s'il y a lieu.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendix 5

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these items by means of benefits separate from those regulated by statistical means. Finally, government

Appendice 5

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que

employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking an other complete survey.

statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources de données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistics Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11

Communications	3
Domestic help (depending on location)	2-8
Clothing and home furnishings	22
Transportation and automobile operation	22
Health and personal care	25
Reading and recreation	13
Tobacco and alcohol	12

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

Groupe principal de produits	Nombre d'articles dont le prix est relevé (lorsque disponibles)
Aliments consommés à la maison	104

Now More Than Ever, Strategic Planning Requires Reliable Trade Information . . .

. . . And We've Got It.

At the International Trade Division, Statistics Canada, we edit, compile and analyse data from hundreds of thousands of Customs documents each month. Available on tape, printouts, microfiche, diskettes or publications, these statistics can serve to:

- ✓ determine market shares
- ✓ identify domestic and foreign market trends
- ✓ forecast inventory and plan production
- ✓ describe merchandise trade

Do You Need A Special Report Designed To Meet Your Specific Needs? We've Got It.

If you are interested in one commodity or a certain country you may wish a monthly, quarterly or annual report on exports/imports. We can tailor a report just for you. Data variables include:

- | | |
|------------------------------|------------------------------|
| ✓ U.S. state of destination | ✓ quantity shipped |
| ✓ mode of transport | ✓ HS class |
| ✓ country origin/destination | ✓ value of commodity shipped |

Do You Need Comprehensive World Trade Data? We've Got It!

Our World Trade Database presents a complete matrix of country to country trade flows for 160 countries, 600 commodities and 300 industries. That's the most comprehensive database of comparable trade data available today.

Do You Need a Complete Database of Timely Trade Statistics? We've Got It!

TIERS, our new software package provides data on over 15,000 commodities for 200 countries at the most detailed level for imports and exports. It is updated monthly, just 48 hours after the data are released and allows you immediate access to quantity, value, province, year and U.S. state code variables.

Put Our Data To Work For You!

To receive a free copy of the Catalogue of Products and Services available from the International Trade Division or to talk with a technical consultant about how we can help you, please contact:
Trade Information Unit

Aujourd'hui plus que jamais, la planification stratégique nécessite des renseignements fiables sur le commerce . . .

. . . Et nous les avons.

À la Division du commerce international de Statistique Canada, nous vérifions, rassemblons et analysons chaque mois les données de centaines de milliers de documents douaniers. Les statistiques sur bande, sur sortie imprimée, sur microfiche, sur disquette ou sous forme de publications peuvent servir à:

- ✓ déterminer les parts de marché
- ✓ dégager les tendances sur les marchés intérieurs et étrangers
- ✓ gérer les stocks et planifier la production
- ✓ décrire le commerce de marchandises

Avez-vous besoin d'un rapport spécial répondant parfaitement à vos besoins? Nous l'avons!

Si vous vous intéressez à une marchandise ou à un pays particulier, un rapport mensuel, trimestriel ou annuel sur les exportations/importations vous serait peut être utile. Nous pouvons vous produire un rapport sur mesure. Les données peuvent être présentées en fonction des variables:

- | | |
|-------------------------------------|---------------------|
| ✓ état américain de destination | ✓ quantité expédiée |
| ✓ valeur des marchandises expédiées | ✓ classe du SH |
| ✓ pays d'origine/de destination | ✓ mode de transport |

Avez-vous besoin de données sur l'ensemble du commerce mondial?

Nous les avons!

Notre Base de données sur le commerce mondial donne accès à une matrice complète de données sur les flux des échanges pour 160 pays, 600 groupes de marchandises et 300 branches d'activité. Cette base de données comparables sur le commerce est la plus complète qui soit.

Avez-vous besoin d'une base de données complète offrant des statistiques actuelles sur le commerce?

Nous l'avons!

TIERS est notre nouveau progiciel donnant accès à des données très détaillées sur les importations et les exportations, et ce pour 200 pays et plus de 15,000 marchandises. Les mises à jour s'effectuent mensuellement, à peine 48 heures après la diffusion des données, ce qui vous permet d'accéder sans délai aux variables quantité, valeur, province, année et code d'état américain.

Mettez nos données à votre service!

How long would it take you to get 10,000 price quotes from 3,500 companies?

A lot longer than it takes to open a copy of **Industry Price Indexes**. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

Industry Price Indexes are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from fish fillets to industrial furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$182 in Canada, US\$218 in the United States and US\$255 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Combien de temps vous faudrait-il pour obtenir 10 000 propositions de prix de 3 500 compagnies ?

Beaucoup plus de temps qu'il n'en faut pour lire un exemplaire d'**Indices des prix de l'industrie**. Abonnez-vous dès maintenant afin d'avoir accès aux données les plus complètes possible sur les prix de vente des manufacturiers canadiens.

Indices des prix de l'industrie est indispensable si vous avez besoin de rapports à jour, uniformes et fiables au sujet des fluctuations des prix à la production au Canada. Ces indices peuvent servir notamment à préparer des contrats d'indexation, à gérer des stocks, à suivre des tendances au moyen de graphiques, à prévoir des fluctuations de prix ou à compiler des données pour concevoir votre propre indice.

Cette publication mensuelle porte sur les matières premières, l'énergie et plus de 700 produits classés dans 20 grandes catégories. Les articles répertoriés vont des filets de poisson aux fours industriels en passant par les bovins et le pétrole brut. Pour la plupart des produits, les statistiques ont une portée nationale; toutefois, pour certains, elles revêtent un caractère régional.

Chaque numéro donne également une perspective historique; des tableaux indiquent les moyennes annuelles et les indices des prix mensuels des produits au cours des cinq dernières années.

Indices des prix de l'industrie est le seul périodique aussi complet et détaillé. Il fait autorité en ce qui touche les fluctuations des prix de vente des marchandises fabriquées au Canada.

Abonnez-vous !

L'abonnement au mensuel **Indices des prix de l'industrie** (n° 62-011 au catalogue) coûte 182 \$ au Canada, 218 \$ US aux États-Unis et 255 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

What happened to the cost of living last month?

The Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), **The Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- food
- clothing
- housing
- health and personal care
- recreation, reading and education
- tobacco products and alcoholic beverages

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of change.

Get the facts.

Subscribe to **The Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$93 in Canada, US\$112 in the United States and US\$130 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Qu'en était-il du coût de la vie le mois dernier ?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur:

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changement.

Abonnez-vous !

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 93 \$ au Canada, 112 \$ US aux États-Unis et 130 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and the listed documents should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- ^P preliminary figures.
- ^r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- **Michel Jacod**, Director, Prices Division
- **François Bordé**, Chief, Consumer Prices Section
- **Harold Harnarine**, Head, Information and Current Analysis Unit

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- ^P nombres provisoires.
- ^r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats Building, Ottawa, K1A 0T6.

Cette publication a été rédigée sous la direction de:

- **Michel Jacod**, Directeur, Division des prix
- **François Bordé**, Chef, Section des prix à la consommation
- **Harold Harnarine**, Chef, Sous-section de l'information et de l'analyse courante

Le papier utilisé dans la présente publication répond aux exigences minimales de l'American National Standard for Information Sciences – "Permanence of Paper for Printed Library Materials", ANSI Z39.48 – 1984.

Highlights

Consumer Price Behaviour

Third Quarter, 1991

Trends in the All-items Index.

Between June and September 1991 (third quarter) the All-items Consumer Price Index (CPI) for Canada increased 0.4% in seasonally adjusted terms. This increase was smaller than the 2.7% and 0.7% increases registered in the first and second quarters respectively. In seasonally adjusted terms, the CPI rose 0.2% in both July and August and remained unchanged in September.

The deceleration was also evident for unadjusted indexes. In the third quarter the CPI registered no change compared to increases of 3.0% and 1.1% in the first and second quarters respectively. The unusual large increase in the first quarter was mainly attributable to the introduction of the Federal Goods and Services Tax (GST) in January.

On a yearly basis, the All-items CPI continued to increase but at a slower pace. The average of 12-month rates of increase in the third quarter was 5.7%, down from the 6.4% and the 6.3% noted in the first and second quarters respectively. The sharp rise in January due to the GST has influenced the longer term comparison. As a result between September 1990 and September 1991 the CPI rose by 5.4%, a rate considerably higher than the 4.2% increase observed between September 1989 and September 1990.

Contributions by Major Components.

In unadjusted terms, the stability of the All-items index was explained by a 3.1% decline in the Food index, and a decrease of 0.4% in the Health and Personal Care index, both compensated for by increases in the other major components.

The largest upward impact on the All-items index came from an increase of 0.6% in the Housing index. This was followed, in rank order, by advances in the Recreation, Reading and Education index (1.9%) and in the Transportation index (0.7%). Much further behind were increases in the Tobacco Products and Alcoholic Beverages index (0.7%) and in the Clothing index (0.5%).

Contributions by Lower-Level indexes.

The Food index fell by 3.1% in the third quarter. This included a drop of 4.6% in the index for Food Purchased from Stores offset partially by a rise of 0.5% in the index for Food Purchased from Restaurants. In unadjusted terms, the Food index fell in July, August and September, due to declines in the index for Food Purchased from Stores.

Faits saillants

Comportement des prix à la consommation

Troisième trimestre, 1991

Tendances de l'indice d'ensemble

Entre juin et septembre 1991 (troisième trimestre), l'indice d'ensemble désaisonnalisé des prix à la consommation (IPC) au Canada augmente de 0.4%, soit à un rythme inférieur à ceux de 2.7% et de 0.7% enregistrés respectivement au premier et au deuxième trimestres. L'IPC désaisonnalisé s'accroît de 0.2% tant en juillet qu'en août et il demeure inchangé en septembre.

On constate également une décélération des indices non désaisonnalisés. Au troisième trimestre, l'IPC n'a pas varié alors qu'il avait augmenté de 3.0% et de 1.1% au premier et au deuxième trimestres respectivement. La forte hausse inhabituelle du premier trimestre s'explique surtout par l'adoption de la taxe fédérale sur les biens et services (TPS) en janvier.

Sur une base annuelle, l'indice d'ensemble continue de croître, mais à un rythme inférieur. La moyenne des taux sur douze mois au troisième trimestre est de 5.7%, soit un recul par rapport aux taux de 6.4% et de 6.3% observés respectivement au premier et au deuxième trimestres. La forte hausse de janvier attribuable à la TPS influe sur les comparaisons à plus long terme. Par conséquent, entre septembre 1990 et septembre 1991, l'IPC augmente de 5.4%, ce taux étant sensiblement plus élevé que la hausse de 4.2% observée entre septembre 1989 et septembre 1990.

Contributions des principales composantes

La stabilité de l'indice d'ensemble non désaisonnalisé s'explique par les replis de 3.1% de l'indice des aliments et de 0.4% de l'indice de la santé et des soins personnels, qui ont tous deux été neutralisés par des augmentations des autres composantes principales.

La pression à la hausse exercée sur l'indice d'ensemble découle surtout d'une augmentation de 0.6% de l'indice de l'habitation. Suivent, par ordre d'importance, des hausses de l'indice des loisirs, de la lecture et de la formation (1.9%) et de l'indice des transports (0.7%). Bien loin derrière viennent les montées de l'indice des produits du tabac et des boissons alcoolisées (0.7%) et de l'indice de l'habillement (0.5%).

Contributions des indices de niveau inférieur

L'indice des aliments recule de 3.1% au troisième trimestre. Cette baisse comprend le repli de 4.6% de l'indice des aliments achetés au magasin, partiellement compensé par le relèvement de 0.5% de l'indice des aliments achetés au restaurant. L'indice non désaisonnalisé des aliments diminue en juillet, août et septembre en raison de la baisse de l'indice des aliments achetés au magasin.

The latest 4.6% drop in the index for Food Purchased from Stores was largely attributable to a 42.6% decline in the Fresh Vegetables index. Some part of this decline was associated with better growing and harvesting conditions this year since, in the same period last year, the index fell by 25.6%. In July much of the decline was associated with ample supplies of salad-type vegetables (tomatoes, lettuce, cucumbers and celery). In August and September, the domestic harvests of storable type vegetables (onions, potatoes, carrots and cabbages) caused fresh vegetable prices to tumble further downwards. Some part of the overall decline in the Food Purchased from Stores index was also associated with lower prices for fresh fruit, notably for bananas and pears. Price falls were also registered for beef, chicken, prepared, ready-cooked and cured meat, selected dairy products, cereal grain products, pasta products, soft drinks and sugar and sugar preparations.

The Housing index increased 0.6% in the third quarter, roughly the same as the 0.7% rise in the second quarter. A major proportion of the upward pressure in the latest period resulted from a 1.1% rise in the Rented Accommodation index. Annual rent increases, mostly for the Province of Québec, enter the CPI in August every year. The Owned Accommodation index rose 0.2% as higher prices for new houses and increased maintenance and repair charges were offset by a decline in mortgage interest costs. Peak summer rates, normally observed in July, were also reflected in hotel/motel accommodation. In addition increased prices were reported for furniture, household textiles, selected appliances, detergent and soap and child care services. Higher utility rates were noted for piped gas, electricity and water but fuel oil prices fell in line with the downward trend noted between February and May. Other falling prices were noted for long-distance telephone services, pet food and selected paper products.

The Recreation, Reading and Education index advanced 1.9% in the third quarter following no change in the second quarter. The dominant factor in the latest period was a rise of 14.7% in university tuition fees. Universities in all provinces raised annual tuition fees by an average 16.9% in September. The increases ranged from a low of 8.5% in Ontario to a high of 43.8% in Québec. In September 1990, Québec increased tuition fees by 70.0% after such fees had remained stable for more than twenty years. The Recreation index rose 0.2% as higher prices for sporting and athletic equipment, selected recreational vehicles and admissions to live sports events were offset partially by lower prices for photographic goods.

The Transportation index climbed 0.7% in the third quarter compared to a fall of 0.2% in the second quarter. The rise in the latest period was explained largely by higher prices for gasoline and new cars. Gasoline prices fell consistently from December last year to March of this year after which time noticeable increases were observed, except in the month of August, where a small drop was noted. Prices of new cars were relatively weak since the beginning of the year. However, the withdrawal of manufacturers' rebates on several models and the introduction of the "gas guzzler" tax in Ontario caused the Auto Purchase index to turn around sharply in August. Seasonal increases in automobile rental charges were observed in September and a rise in passenger fares for travel within the city was also noted. The overall increase was moderated to some extent by a 4.1% drop in air fares attributable to seasonal reductions in ticket prices to destinations in the United States, Europe and the Caribbean.

Le plus récent recul de 4.6% de l'indice des aliments achetés au magasin est en majeure partie attribuable à la diminution de 42.6% de l'indice des légumes frais. Ce repli s'explique en partie par l'amélioration des conditions de croissance et de récolte cette année car l'indice a reculé de 25.6% pendant la même période l'année dernière. En juillet, la majeure partie de la hausse est attribuable à l'abondance des approvisionnements de légumes utilisés dans les salades (tomates, laitue, concombres et céleri). En août et en septembre, la récolte des légumes destinés à l'entreposage (oignons, pommes de terre, carottes et choux) a entraîné une autre chute du prix des légumes frais. La diminution globale de l'indice des aliments achetés au magasin est également attribuable en partie à la baisse du prix des fruits frais, en particulier des bananes et des poires. On relève également un recul du prix du boeuf, du poulet, des préparations à base de viande et des viandes cuites, de certains produits laitiers, des produits céréaliers, des pâtes alimentaires, des boissons gazeuses, du sucre et des confiseries.

L'indice de l'habitation progresse de 0.6% au troisième trimestre, ce taux étant pratiquement équivalent à la hausse de 0.7% du deuxième trimestre. La récente pression à la hausse est en majeure partie attribuable à l'accroissement de 1.1% de l'indice du logement en location. Les augmentations annuelles de loyer, principalement au Québec, sont prises en compte chaque année dans l'IPC au mois d'août. L'indice du logement en propriété augmente de 0.2%, le relèvement du prix des maisons neuves et des frais d'entretien et de réparation étant neutralisé par le recul des frais d'intérêts hypothécaires. Le prix des chambres d'hôtel et de motel subit également l'influence des tarifs estivaux maximaux, qu'on observe normalement en juillet. En outre, on constate une augmentation du prix des meubles, des articles ménagers en matière textile, de certains appareils ménagers, du détergent et du savon et des services de soins d'enfants. On relève une majoration des tarifs des services publics pour ce qui est du gaz naturel, de l'électricité et de l'eau, mais le prix du mazout a suivi la tendance à la baisse observée entre février et mai. On remarque également la diminution du prix des appels interurbains, des aliments pour animaux et de certains articles en papier.

L'indice des loisirs, de la lecture et de la formation progresse de 1.9% au troisième trimestre, après être demeuré stable au deuxième trimestre. Le facteur dominant est la hausse de 14.7% des frais de scolarité universitaire. En septembre, les universités de toutes les provinces ont augmenté les frais de scolarité annuels de 16.9% en moyenne. Ces hausses varient, depuis 8.5% en Ontario jusqu'à 43.8% au Québec. En septembre 1990, le Québec a augmenté les frais de scolarité de 70.0%, cette hausse étant la première depuis plus de 20 ans. L'indice des loisirs s'accroît de 0.2%, les hausses de prix des articles de sport et d'athlétisme, de certains véhicules de loisirs et des droits d'entrée à des événements sportifs en direct ayant été partiellement compensées par le recul du prix du matériel photographique.

L'indice des transports augmente de 0.7% au troisième trimestre après avoir diminué de 0.2% au deuxième trimestre. Cette récente poussée est en majeure partie attribuable au relèvement du prix de l'essence et des automobiles neuves. Le prix de l'essence a régulièrement diminué depuis le mois de décembre de l'année dernière jusqu'au mois de mars de la présente année. Par la suite, il a considérablement augmenté, sauf en août alors qu'on constatait un faible recul. Le prix des automobiles neuves est relativement faible depuis le début de l'année. Toutefois, le retrait des rabais consentis par les fabricants sur plusieurs modèles et l'adoption de la taxe sur les automobiles qui consomment beaucoup en Ontario expliquent le revirement marqué de l'indice de l'achat des automobiles en août. On observe une hausse saisonnière des frais de location d'automobiles en septembre, de même que le relèvement des tarifs des transports urbains. L'augmentation globale est neutralisée, dans une certaine mesure, par le recul de 4.1% des tarifs aériens attribuables aux réductions saisonnières du prix des billets pour les vols à destination des États-Unis, de l'Europe et des Caraïbes.

Increases of 0.7% in the Alcoholic Beverages index and 0.6% in the prices of cigarettes caused the Tobacco Products and Alcoholic Beverages index to rise 0.7%. Prices of served alcoholic beverages increased 0.9% on average while those of alcoholic products purchased from stores rose 0.7%. Much of the rise in the former was observed in August and was traceable to higher prices passed on by brewers and manufacturers. Prices in the latter category rose in July mostly identified with tax increases in Québec. Cigarette prices rose in September mainly in response to higher manufacturers' prices and a tax increase in British Columbia.

The Clothing index moved up 0.5% in the third quarter following a drop of 0.5% in the second quarter. Much of the rise in the latest quarter was associated with increases of 0.8% in the Women's Wear index, 1.1% in the Girls' Wear index and 4.0% in the Clothing Materials index. At the same time the Men's Wear index remained unchanged while the Boys' Wear index fell 1.5%. Much of the increase in the latest quarter was traceable to higher prices for new fall merchandise and a return to regular prices.

A drop of 0.4% in the Health and Personal Care index contributed marginally to the overall unchanged status of the All-items index. Much of the weakness was associated with lower prices for personal care supplies, prescription eye wear and non-prescribed medicines. By contrast, dental care charges and prices of prescribed medicines rose.

Des augmentations de 0.7% de l'indice des boissons alcoolisées et de 0.6% du prix des cigarettes ont entraîné une hausse de 0.7% de l'indice des produits du tabac et des boissons alcoolisées. Le prix des boissons alcoolisées servies dans des débits de boissons progresse en moyenne de 0.9% tandis que celui des boissons alcoolisées achetées des magasins s'accroît de 0.7%. La poussée de la première composante, observée en août, est en majeure partie attribuable aux majorations de prix décrétées par les brasseurs et les fabricants. Pour ce qui est de la deuxième composante, la hausse de prix constatée en juillet s'explique surtout par la majoration des taxes au Québec. Le prix des cigarettes s'accroît en septembre surtout en raison de l'augmentation du prix des fabricants et d'un relèvement fiscal en Colombie-Britannique.

L'indice de l'habillement s'accroît de 0.5% au troisième trimestre après avoir diminué de 0.5% au deuxième trimestre. La majeure partie de la hausse du dernier trimestre est attribuable au relèvement de 0.8% de l'indice des vêtements pour femmes, de 1.1% de l'indice des vêtements pour filles et de 4.0% de l'indice du tissu pour vêtements. Parallèlement, l'indice des vêtements pour hommes demeure inchangé, tandis que celui des vêtements pour garçons diminue de 1.5%. La majeure partie de la hausse du dernier trimestre est le résultat du relèvement du prix de la nouvelle marchandise d'automne et du retour aux prix réguliers.

Dans l'ensemble, l'indice d'ensemble n'a pratiquement pas varié en dépit d'un repli de 0.4% de l'indice de la santé et des produits de soins personnels. La faiblesse est en majeure partie attribuable à la diminution du prix des articles de soins personnels, des lunettes et des lentilles cornéennes médicales et des médicaments sans ordonnance. Par contre, les frais de soins dentaires et le prix des médicaments sur ordonnance augmentent.

Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, The Consumer Price Index, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagregé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

¹ Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

¹ La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principale de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

TABLE 2. Purchasing Power of the Consumer Dollar¹ Expressed in Cents, Compared to 1986, 1982-1991TABLEAU 2. Pouvoir d'achat du dollar à la consommation¹ (en cents), par rapport à 1986, 1982-1991

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1982	Weights 1986
Composantes principales	Pondérations 1982	Pondérations 1986
All-items - Ensemble	100.00¹	100.00¹
Food - Aliments	20.02	18.05
Housing - Habitation	38.14	36.32
Clothing - Habillement	8.37	8.69
Transportation - Transports	15.75	18.29
Health and personal care - Santé et soins personnels	4.02	4.20
Recreation, reading and education - Loisirs, lecture et formation	8.25	8.84
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.45	5.60

¹ Figures may not add up due to rounding.

¹ Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981=100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Les pondérations du tableau explicatif II représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981=100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1986=100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1986=100 time base became effective with the release of the June 1990 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised periodically.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1981=100 or 1986=100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1986=100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1981 or 1986 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs - Service Bulletin** (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1986=100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1986=100 est devenue effective à partir de la diffusion de l'indice de juin 1990. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision périodiquement.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1981=100 et 1986=100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1986=100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1981 ou 1986) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie - Bulletin de service** (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in *Family Expenditure in Canada, 1986*, Catalogue 62-555.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans *Dépenses des familles au Canada, 1986*, n° 62-555 au catalogue.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1986 and June 1990, consumer prices as measured by the CPI rose 19.2% such that, goods and services which could have been purchased for \$100.00 in 1986 would cost \$119.20 in June 1990. Each consumer dollar in June 1990 therefore buys less than in 1986. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in June 1990 compared to the 1986

dollar was 83.9 (100 cents X $\frac{100.0}{119.2}$ = 83.9 cents).

This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1986 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1986 et juin 1990, les prix à la consommation mesurés par l'IPC ont grimpé de 19.2% de sorte que les biens et services qu'on pouvait acheter en 1986 avec \$100.00 coûtaient \$119.20 en juin 1990. Chaque dollar de consommation en juin 1990 achète donc moins qu'en 1986. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en juin 1990, par rapport au dollar de 1986,

s'établissait à 83.9 cents (100 cents X $\frac{100.0}{119.2}$ = 83.9 cents).

Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1986 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

The methodologies used for removing as much of the seasonal fluctuation as possible from a series have been described in detail in numerous articles and texts on the subject.¹ Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question¹. Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fut changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. étant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is under taken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally under taken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The goods and services tax (GST) and the provincial retail sales tax are included in the retail averages where applicable.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe sur les produits et services (TPS) et la taxe de vente au détail sont ajoutées au prix de détail moyen s'il y a lieu.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas des articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendix 5

CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 23 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.¹

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's	- Halifax
Charlottetown	- Halifax
Saint John	- Halifax
Ottawa	- Halifax
Toronto	- Montréal
Ottawa	- Toronto
Toronto	- Winnipeg
Regina	- Winnipeg
Edmonton	- Winnipeg
Edmonton	- Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item in dexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

¹ See Table 14 and Appendix 4.

Appendice 5

COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 23 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville¹ pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's	- Halifax
Charlottetown	- Halifax
Saint John	- Halifax
Ottawa	- Halifax
Toronto	- Montréal
Ottawa	- Toronto
Toronto	- Winnipeg
Regina	- Winnipeg
Edmonton	- Winnipeg
Edmonton	- Vancouver

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

¹ Voir tableau 14 et appendice 4.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

Footnotes for Table 23

- (2) The weights shown are rounded 1986 weights as contained in the report **The Consumer Price Index Reference Paper, Updating Based on 1986 Expenditures** (Occasional), Catalogue 62-553. They are provided for illustration only; the weights actually used are combined cities weights with adjustments for price change since 1986.
- (3) Includes the following sub-groups: Condiments, spices and vinegar, sugar and sugar preparations, coffee and tea, fats and oils and other foods, food preparation materials and food preparations.

Notes pour le tableau 23

- (2) Les poids indiqués sont les poids arrondis pour 1986 figurant dans **Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986** (hors-série, n° 62-553 au catalogue. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinés rajustés en fonction des variations des prix observées depuis 1986.
- (3) Comprend les sous-groupes suivants: Condiments, épices et vinaigre, sucre et préparations à base de sucre, le café et le thé, les huiles et matières grasses et les autres aliments, ingrédients et préparations alimentaires.

Appendix 6

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these items by means of benefits separate from those regulated by statistical means. Finally, government

Appendice 6

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que

employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking an other complete survey.

statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources de données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistics Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8
Clothing and home furnishings	22
Transportation and automobile operation	22
Health and personal care	25
Reading and recreation	13
Tobacco and alcohol	12

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

Groupe principal de produits	Nombre d'articles dont le prix est relevé (lorsque disponibles)
Aliments consommés à la maison	104
Repas pris à l'extérieur	9
Entretien et services ménagers	11

Now More Than Ever, Strategic Planning Requires Reliable Trade Information . . .

. . . And We've Got It.

At the International Trade Division, Statistics Canada, we edit, compile and analyse data from hundreds of thousands of Customs documents each month. Available on tape, printouts, microfiche, diskettes or publications, these statistics can serve to:

- ✓ determine market shares
- ✓ identify domestic and foreign market trends
- ✓ forecast inventory and plan production
- ✓ describe merchandise trade

Do You Need A Special Report Designed To Meet Your Specific Needs?

We've Got It.

If you are interested in one commodity or a certain country you may wish a monthly, quarterly or annual report on exports/imports. We can tailor a report just for you. Data variables include:

- | | |
|------------------------------|------------------------------|
| ✓ U.S. state of destination | ✓ quantity shipped |
| ✓ mode of transport | ✓ HS class |
| ✓ country origin/destination | ✓ value of commodity shipped |

Do You Need Comprehensive World Trade Data? We've Got It!

Our World Trade Database presents a complete matrix of country to country trade flows for 160 countries, 600 commodities and 300 industries. That's the most comprehensive database of comparable trade data available today.

Do You Need a Complete Database of Timely Trade Statistics?

We've Got It!

TIERS, our new software package provides data on over 15,000 commodities for 200 countries at the most detailed level for imports and exports. It is updated monthly, just 48 hours after the data are released and allows you immediate access to quantity, value, province, year and U.S. state code variables.

Put Our Data To Work For You!

To receive a free copy of the Catalogue of Products and Services available from the International Trade Division or to talk with a technical consultant about how we can help you, please contact:

Aujourd'hui plus que jamais, la planification stratégique nécessite des renseignements fiables sur le commerce . . .

. . . Et nous les avons.

À la Division du commerce international de Statistique Canada, nous vérifions, rassemblons et analysons chaque mois les données de centaines de milliers de documents douaniers. Les statistiques sur bande, sur sortie imprimée, sur microfiche, sur disquette ou sous forme de publications peuvent servir à:

- ✓ déterminer les parts de marché
- ✓ dégager les tendances sur les marchés intérieurs et étrangers
- ✓ gérer les stocks et planifier la production
- ✓ décrire le commerce de marchandises

Avez-vous besoin d'un rapport spécial répondant parfaitement à vos besoins?

Nous l'avons!

Si vous vous intéressez à une marchandise ou à un pays particulier, un rapport mensuel, trimestriel ou annuel sur les exportations/importations vous serait peut être utile. Nous pouvons vous produire un rapport sur mesure. Les données peuvent être présentées en fonction des variables:

- | | |
|-------------------------------------|---------------------|
| ✓ état américain de destination | ✓ quantité expédiée |
| ✓ valeur des marchandises expédiées | ✓ classe du SH |
| ✓ pays d'origine/de destination | ✓ mode de transport |

Avez-vous besoin de données sur l'ensemble du commerce mondial?

Nous les avons!

Notre Base de données sur le commerce mondial donne accès à une matrice complète de données sur les flux des échanges pour 160 pays, 600 groupes de marchandises et 300 branches d'activité. Cette base de données comparables sur le commerce est la plus complète qui soit.

Avez-vous besoin d'une base de données complète offrant des statistiques actuelles sur le commerce?

Nous l'avons!

TIERS est notre nouveau progiciel donnant accès à des données très détaillées sur les importations et les exportations, et ce pour 200 pays et plus de 15,000 marchandises. Les mises à jour s'effectuent mensuellement, à peine 48 heures après la diffusion des données, ce qui vous permet d'accéder sans délai aux variables quantité, valeur, province, année et code d'état américain.

Mettez nos données à votre service!

How long would it take you to get 10,000 price quotes from 3,500 companies?

A lot longer than it takes to open a copy of **Industry Price Indexes**. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

Industry Price Indexes are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from fish fillets to industrial furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$182 in Canada, US\$218 in the United States and US\$255 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Combien de temps vous faudrait-il pour obtenir 10 000 propositions de prix de 3 500 compagnies ?

Beaucoup plus de temps qu'il n'en faut pour lire un exemplaire d'**Indices des prix de l'industrie**. Abonnez-vous dès maintenant afin d'avoir accès aux données les plus complètes possible sur les prix de vente des manufacturiers canadiens.

Indices des prix de l'industrie est indispensable si vous avez besoin de rapports à jour, uniformes et fiables au sujet des fluctuations des prix à la production au Canada. Ces indices peuvent servir notamment à préparer des contrats d'indexation, à gérer des stocks, à suivre des tendances au moyen de graphiques, à prévoir des fluctuations de prix ou à compiler des données pour concevoir votre propre indice.

Cette publication mensuelle porte sur les matières premières, l'énergie et plus de 700 produits classés dans 20 grandes catégories. Les articles répertoriés vont des filets de poisson aux fours industriels en passant par les bovins et le pétrole brut. Pour la plupart des produits, les statistiques ont une portée nationale; toutefois, pour certains, elles revêtent un caractère régional.

Chaque numéro donne également une perspective historique; des tableaux indiquent les moyennes annuelles et les indices des prix mensuels des produits au cours des cinq dernières années.

Indices des prix de l'industrie est le seul périodique aussi complet et détaillé. Il fait autorité en ce qui touche les fluctuations des prix de vente des marchandises fabriquées au Canada.

Abonnez-vous !

L'abonnement au mensuel **Indices des prix de l'industrie** (n° 62-011 au catalogue) coûte 182 \$ au Canada, 218 \$ US aux États-Unis et 255 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

What happened to the cost of living last month?

The Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), **The Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- food
- clothing
- housing
- health and personal care
- recreation, reading and education
- tobacco products and alcoholic beverages

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of change.

Get the facts.

Subscribe to **The Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$93 in Canada, US\$112 in the United States and US\$130 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Qu'en était-il du coût de la vie le mois dernier ?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur:

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changement.

Abonnez-vous !

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 93 \$ au Canada, 112 \$ US aux États-Unis et 130 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- ^p preliminary figures.
- ^r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- **Michel Jacod**, Director, Prices Division
- **François Bordé**, Chief, Consumer Prices Section
- **Harold Harnarine**, Head, Information and Current Analysis Unit

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- ^p nombres provisoires.
- ^r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats Building, Ottawa, K1A 0T6.

Highlights

Consumer Price Behaviour

Fourth Quarter, 1991

Trends in the All-items Index

Between September and December 1991 (fourth quarter), the All-items Consumer Price Index (CPI) for Canada registered no change in seasonally adjusted terms. In quarterly terms, the seasonally adjusted increases in the CPI fell continuously throughout 1991, from 2.7% in the first quarter, to 0.8% and 0.2% in the second and third quarters respectively. In the last quarter of 1991 the monthly movements varied from a drop of 0.2% in October to a rise of 0.2% in November and no change in December.

A similar type of quarterly price change behaviour was indicated by the unadjusted CPI. In the fourth quarter of 1991 the index fell by 0.2%, after increases of 3.0% and 1.0% in the first and second quarter respectively and no change in the third quarter. The large increase in the first quarter was associated mainly with the introduction of the Federal Goods and Services Tax (GST) in January.

On an annual basis, the increase in the CPI slowed down at a noticeable pace towards the end of the year. The average of 12-month rates of increase in the fourth quarter 1991 was 4.1% compared to the 5.7% advance in the third quarter and increases of 6.4% and 6.3% in the first and second quarter respectively. The extent of the declining trend in the final quarter was more dramatic using the 12-month changes at the start and at the end of the fourth quarter. The increase between September 1990 and September 1991 was 5.4% compared to the much slower 3.8% registered between December 1990 and December 1991.

Along with the noticeable deceleration in the 12-month changes, the increase based on the overall annual average of 1991 compared with the corresponding average for 1990 was 5.6%. This was the highest annual increase since the 5.7% rise posted in 1983.

Contributions by Major Components

The drop of 0.2% in the unadjusted All-items in the fourth quarter 1991 was largely attributable to declines of 1.4% in the Food index and 1.6% in the Clothing index. Some proportion of this dominant downward pull on the All-items index was offset by increases of 0.2% in the Housing index and 0.7% in the Tobacco Products and Alcoholic Beverages index. Large offsetting movements within the Transportation component caused the index to register no change.

Contributions by Lower-Level indexes

The Food index fell by 1.4% in the fourth quarter. This resulted from a drop of 2.3% in the index for Food Purchased from Stores offset, to a small extent, by a rise of 0.6% in the index for Food Purchased from Restaurants. In unadjusted terms, the Food index fell in each month starting in July to October, rose slightly in November and plunged again in December. This pattern was explained by the behaviour of the Food Purchased from Stores index.

Faits saillants

Comportement des prix à la consommation

Quatrième trimestre de 1991

Tendances de l'indice d'ensemble

Entre septembre et décembre 1991 (quatrième trimestre), l'indice d'ensemble désaisonnalisé des prix à la consommation (IPC) reste inchangé. Par trimestre, les augmentations désaisonnalisées de l'IPC se réduisent pendant toute l'année 1991, passant de 2.7% au premier trimestre à 0.8% et à 0.2% respectivement au deuxième et au troisième trimestre. Au dernier trimestre de 1991, les mouvements mensuels sont compris entre une baisse de 0.2% en octobre, une hausse de 0.2% en novembre, et une variation nulle en décembre.

L'IPC brut suit un comportement trimestriel des prix semblable. Au quatrième trimestre de 1991, l'indice baisse de 0.2%, après des hausses de 3.0% et de 1.0% au premier et au deuxième trimestre et une variation nulle au troisième. La forte hausse du premier trimestre se rattache principalement à l'entrée en vigueur de la taxe sur les produits et services (TPS) en janvier.

Sur base annuelle, la croissance de l'IPC se ralentit de façon notable vers la fin de l'année. La moyenne des taux d'augmentation sur 12 mois au quatrième trimestre de 1991 s'établit à 4.1%, comparativement à 5.7% au troisième trimestre et à 6.4% et à 6.3% respectivement au premier et au deuxième trimestre. L'ampleur de la tendance à la baisse au quatrième trimestre est encore plus spectaculaire si l'on prend les variations sur 12 mois au début et à la fin du quatrième trimestre. L'accroissement entre septembre 1990 et septembre 1991 est de 5.4%, alors qu'entre décembre 1990 et décembre 1991, il est beaucoup plus faible (3.8%).

En plus de la décélération notable des variations sur 12 mois, l'accroissement basé sur la moyenne annuelle générale de 1991 par rapport à la moyenne correspondante de 1990 est de 5.6%. Il s'agit de l'augmentation annuelle la plus forte depuis la hausse de 5.7% enregistrée en 1983.

Contribution des principales composantes

La diminution de 0.2% de l'indice d'ensemble non désaisonnalisé au quatrième trimestre de 1991 s'explique principalement par des diminutions de 1.4% et de 1.6% des indices des aliments et de l'habillement respectivement. Une partie de cette pression dominante à la baisse est compensée par des hausses de 0.2% et de 0.7% des indices de l'habitation et des produits du tabac et des boissons alcoolisées. D'importants mouvements compensatoires dans la composante des transports font que l'indice reste inchangé.

Contribution des indices de niveau inférieur

L'indice des aliments baisse de 1.4% au quatrième trimestre. Cette baisse s'explique par une chute de 2.3% de l'indice des aliments achetés au magasin, que compense dans une faible mesure une hausse de 0.6% de l'indice des aliments achetés au restaurant. Avant désaisonnalisation, l'indice des aliments diminue au cours de chaque mois de la période juillet-octobre, augmente légèrement en novembre et chute une nouvelle fois en décembre. Cette évolution s'explique par le comportement de l'indice des aliments achetés au magasin.

The 2.3% drop in the index for Food Purchased from Stores in the latest quarter was attributable mostly to seasonally lower prices for fresh fruit, notably for apples and oranges; the Fresh Fruit index usually declines in every month of the fourth quarter. The price drops in each of the months of the fourth quarter of 1991 were significantly lower than those registered in the corresponding months of 1990. Some further downward pressure in the fourth quarter was exerted by lower prices for beef, pork and turkey. Widespread promotions on soft drinks, breakfast cereal and snack-food, along with lower prices for coffee, sugar, fruit juices, cured meat and fish products, also accounted for some proportion of the overall decline. At the same time higher prices were observed for selected fresh vegetables (notably for carrots, celery and lettuce). Most of this increase was concentrated in the month of November as the Fresh Vegetables index fell in both October and December. Additionally, price increases were observed for selected dairy products, bakery products, chicken and ready cooked meat.

The Clothing index fell by 1.6% in the fourth quarter 1991 resulting from declines of 1.7% in the Women's Wear index, 2.4% in the Men's Wear index and 2.4% in the Girls' Wear index. The Clothing index fell in each of the last four months of the year. Much of this behaviour was attributable to attempts made by retailers to stimulate demand in a predominantly sluggish market.

The Housing index rose by 0.2% in the fourth quarter producing the largest upward impact on the overall price change. The latest rise resulted from a number of offsetting price movements. Noticeable upward pressures emerged from increases of 0.9% in the Owned Accommodation index and 0.7% in the Rented Accommodation index. The former was influenced, to a large extent, by a 5.0% average annual rise in property taxes reported in October and, to a lesser extent, to a rise in homeowners' maintenance and repair charges. In contrast, the rise in owned accommodation charges was dampened by declines in mortgage interest costs and in the prices of new homes. The cost of heating with fuel oil and piped gas rose as did the charges relating to basic telephone services. A large offsetting effect resulted from seasonally lower hotel/motel accommodation rates. Lower prices were also observed for furniture, textiles, household equipment and appliances, detergent and soap, household chemicals and paper supplies.

An increase of 0.7% in the Tobacco Products and Alcoholic Beverages index also contributed moderately to offsetting the overall drop in the CPI. Most of the increase in October was found in cigarette prices which reflected the lagged effects of higher manufacturers' prices and a rise in taxes in British Columbia.

Some marginal upward effects also resulted from increases of 0.2% in each of the Recreation, Reading and Education index and the Health and Personal Care index. The first registered increases in admission charges to entertainment performances, in fees and dues relating to the use of recreational facilities, in the prices of reading material and in tuition fees. These increases were offset, to a considerable extent, by lower prices for photographic goods and selected home-entertainment equipment. In the Health and Personal Care index, the effect of increased charges identified with eye-care and hair grooming services were offset, partially, by lower prices for selected non-prescribed medicines and personal care supplies.

La baisse de 2.3% de l'indice des aliments achetés au magasin au quatrième trimestre de 1991 résulte principalement de la diminution saisonnière pour les fruits frais, en particulier les pommes et les oranges. L'indice des fruits frais diminue habituellement au cours de chaque mois du quatrième trimestre. En 1991, ces diminutions sont sensiblement inférieures à celles observées au cours de la période correspondante de 1990. Le repli du prix du boeuf, du porc et de la dinde a accentué la pression à la baisse. Le recul général s'explique en partie aussi par de nombreuses campagnes de promotion pour les boissons gazeuses, les céréales de table et les grignotines, ainsi que par la diminution du prix du café, du sucre, des jus de fruit, des viandes de salaison et des produits du poisson. On observe par ailleurs une augmentation de prix pour certains légumes frais (notamment les carottes, le céleri et la laitue). La plus grande partie de cette augmentation s'est produite en novembre, l'indice des légumes frais baissant en octobre et en décembre. On observe de plus des hausses de prix pour certains produits laitiers, le poulet et la viande cuite prête à servir.

L'indice de l'habillement baisse de 1.6% au quatrième trimestre de 1991, les indices des vêtements pour femmes, hommes et fillettes se repliant respectivement de 1.7%, de 2.4% et de 2.4%. L'indice de l'habillement baisse au cours des quatre derniers mois de l'année. Cette évolution est due dans une large mesure aux tentatives des détaillants de stimuler la demande sur un marché dans l'ensemble lent.

L'indice de l'habitation s'accroît de 0.2% au quatrième trimestre, ce qui représente la plus forte poussée à la hausse exercée sur la variation de prix générale. Cet accroissement est le résultat de divers mouvements de prix qui se compensent. Les augmentations de 0.9% et de 0.7% respectivement des indices du logement en propriété et en location ont exercé des pressions à la hausse appréciables. Dans le premier cas, l'augmentation s'explique dans une large mesure par une progression annuelle moyenne des impôts fonciers déclarés en octobre, et dans une moindre mesure, par un accroissement des frais d'entretien et de réparations. Par contre, la poussée des frais de logement en propriété est tempérée par la baisse des intérêts hypothécaires et du prix des maisons neuves. Le coût du chauffage au mazout et au gaz canalisés augmente, de même que les frais des services téléphoniques de base. La diminution saisonnière des frais d'hébergement dans les hôtels et les motels se traduit par un important effet compensatoire. On observe également une baisse de prix pour les meubles, les produits en matière textile, les articles d'ameublement et les appareils ménagers, le détergent et le savon, les produits chimiques ménagers et les articles en papier.

L'augmentation de 0.7% de l'indice des produits du tabac et des boissons alcoolisées contribue également de façon modérée à compenser la baisse générale de l'IPC. La plus grande partie de la hausse en octobre touche le prix des cigarettes, qui traduit les effets tardifs du relèvement des prix par les fabricants et une majoration des taxes en Colombie-Britannique.

La hausse de 0.2% de l'indice des loisirs, de la lecture et de l'éducation ainsi que de celui de la santé et des soins personnels entraîne aussi quelques effets à la hausse minimes. Dans le premier cas, ils s'expliquent par l'accroissement des frais d'admission aux spectacles, des droits et cotisations reliés à l'utilisation des installations de loisirs, des prix du matériel de lecture et des frais de scolarité. Ces hausses sont compensées dans une mesure considérable par la baisse du prix des articles de photographie et de certains appareils de loisirs à la maison. S'agissant de l'indice de la santé et des soins personnels, l'accroissement des frais reliés aux services de soins oculaires et de coiffure est compensé en partie par une diminution du prix de certains médicaments sans ordonnance et produits de soins personnels.

The Transportation index remained unchanged in the fourth quarter of 1991. In monthly terms this index fell in October and December but rose by 1.7% in November largely as a result of initial price quotations for the 1992 model vehicles. The latest quarterly performance reflected large offsetting movements contained in the principal components. The upward pressures came from higher prices for new automobiles and increases in air fares. The change in both cases was attributable, in part, to seasonal price behaviour. The impact of such increases was eliminated by declines, mostly in gasoline prices and, to a lesser extent, to seasonally lower rental charges on automobiles and a drop in tire prices. Gasoline prices fell in each of the three months making up the final quarter in addition to five other months of 1991. This adjustment was associated with a market characterized by a glut in supplies accompanied by a decline in demand.

L'indice des transports reste inchangé au quatrième trimestre de 1991. L'indice baisse en octobre et en décembre, mais s'accroît de 1.7% en novembre à cause principalement des premiers prix annoncés pour les modèles automobiles de 1992. Les résultats du quatrième trimestre de 1991 sont la conséquence d'importants mouvements compensatoires des principales composantes. La pression à la hausse s'explique par la majoration du prix des voitures neuves et des tarifs aériens. Dans les deux cas, elle est attribuable en partie au comportement saisonnier des prix. L'incidence de ces augmentations est éliminée par des diminutions, principalement du prix de l'essence, et dans une moindre mesure, par la baisse des frais de location de voitures et du prix des pneus. Le prix de l'essence baisse au cours de chacun des trois mois au quatrième trimestre, comme pendant cinq autres mois en 1991. Cette correction se rattache à un marché caractérisé par un surapprovisionnement et une baisse de la demande.

Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, The Consumer Price Index, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagré.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

¹ Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

¹ La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émises avec la publication de janvier.

TABLE 2. Purchasing Power of the Consumer Dollar¹ Expressed in Cents, Compared to 1986, 1982-1991TABLEAU 2. Pouvoir d'achat du dollar à la consommation¹ (en cents), par rapport à 1986, 1982-1991

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1982	Weights 1986
Composantes principales	Pondérations 1982	Pondérations 1986
All-items - Ensemble	100.00¹	100.00¹
Food - Aliments	20.02	18.05
Housing - Habitation	38.14	36.32
Clothing - Habillement	8.37	8.69
Transportation - Transports	15.75	18.29
Health and personal care - Santé et soins personnels	4.02	4.20
Recreation, reading and education - Loisirs, lecture et formation	8.25	8.84
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.45	5.60

¹ Figures may not add up due to rounding.

¹ Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981=100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Les pondérations du tableau explicatif II représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981=100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1986=100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1986=100 time base became effective with the release of the June 1990 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised periodically.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1981=100 or 1986=100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1986=100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1981 or 1986 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1986=100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1986=100 est devenue effective à partir de la diffusion de l'indice de juin 1990. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision périodiquement.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1981=100 et 1986=100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1986=100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1981 ou 1986) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in *Family Expenditure in Canada, 1986*, Catalogue 62-555.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans *Dépenses des familles au Canada, 1986*, n° 62-555 au catalogue.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1986 and June 1990, consumer prices as measured by the CPI rose 19.2% such that, goods and services which could have been purchased for \$100.00 in 1986 would cost \$119.20 in June 1990. Each consumer dollar in June 1990 therefore buys less than in 1986. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in June 1990 compared to the 1986

$$\text{dollar was } 83.9 \text{ (} 100 \text{ cents} \times \frac{100.0}{119.2} = 83.9 \text{ cents).}$$

This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1986 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1986 et juin 1990, les prix à la consommation mesurés par l'IPC ont grimpé de 19.2% de sorte que les biens et services qu'on pouvait acheter en 1986 avec \$100.00 coûtaient \$119.20 en juin 1990. Chaque dollar de consommation en juin 1990 achète donc moins qu'en 1986. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en juin 1990, par rapport au dollar de 1986,

$$\text{s'établissait à } 83.9 \text{ cents (} 100 \text{ cents} \times \frac{100.0}{119.2} = 83.9 \text{ cents).}$$

Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1986 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

The methodologies used for removing as much of the seasonal fluctuation as possible from a series have been described in detail in numerous articles and texts on the subject.¹ Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question¹. Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fut changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. étant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is under taken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally under taken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The goods and services tax (GST) and the provincial retail sales tax are included in the retail averages where applicable.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe sur les produits et services (TPS) et la taxe de vente au détail sont ajoutées au prix de détail moyen s'il y a lieu.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Average Retail Prices for Gasoline

Tables 16 through 19 present average retail prices for two types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Prix de détail moyens de l'essence

Les tableaux 16 à 19 présentent les prix de détail moyens de deux types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Average Retail Prices for Fuel Oil

Table 20 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 20 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Prix de détail moyens du mazout

Le tableau 20 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 20 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendix 5

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these items by means of benefits separate from those regulated by statistical means. Finally, government

Appendice 5

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que

employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking an other complete survey.

statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources de données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistics Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8
Clothing and home furnishings	22
Transportation and automobile operation	22
Health and personal care	25
Reading and recreation	13
Tobacco and alcohol	12

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

Groupe principal de produits	Nombre d'articles dont le prix est relevé (lorsque disponibles)
Aliments consommés à la maison	104
Repas pris à l'extérieur	9

PICK A TOPIC... ANY TOPIC

The 1992 Statistics Canada Catalogue is your guide to the most complete collection of facts and figures on Canada's changing business, social and economic environment. No matter what you need to know, the Catalogue will point you in the right direction.

From the most popular topics of the day — like employment, income, trade, and education — to specific research studies — like mineral products shipped from Canadian ports and criminal victimization in urban areas — you'll find it all here. We've even included a selection of key statistics from recent publications.

...the 1992 Statistics Canada Catalogue will help you get your bearings...

The Catalogue puts all this information at your fingertips. With the expanded index, you can search by subject, author or title — even periodical articles are indexed.

And for 1992, a separate index has been added for all our electronic products.

The Catalogue has everything you need to access all Statistics Canada's products:

- descriptions of over 80 new titles, plus succinct abstracts of the over 800 titles and 11 map series already produced;
- a preview of upcoming 1991 census products;
- easy ordering information to avoid delays;
- electronic products in a variety of media, and advice on getting expert assistance and on-line searches;
- tabs to each section — so you can immediately flip to the information you need.

...time and time again

To make sure that the Catalogue stands up to frequent use, we used a specially coated cover to prevent broken spines, tattered edges and dog-eared corners.

Order today — you'll be lost without it.

CHOISISSEZ UN SUJET... N'IMPORTE LEQUEL

Le Catalogue de Statistique Canada 1992 est votre guide pour la collection la plus complète de faits et de chiffres sur le monde, en constante évolution, du commerce, du milieu social et de l'économie. Peu importe ce que vous voulez savoir, il vous mettra sur la bonne piste.

Des sujets actuels les plus populaires — comme l'emploi, le revenu, le commerce et l'éducation, à des études de recherche particulières, comme les produits minéraux expédiés des ports canadiens et la victimisation dans les régions urbaines — vous trouverez tout dans ce document.

Nous avons même inclus une sélection des plus importantes statistiques provenant des plus récentes publications.

...le Catalogue de Statistique Canada 1992 vous aidera à vous orienter...

Le Catalogue vous met tous ces renseignements sous la main.

L'index augmenté vous permet de chercher par sujet, auteur ou titre — les articles de périodiques sont même indexés. Et pour 1992, on a ajouté un index séparé pour tous nos produits électroniques.

Le Catalogue a tout ce qu'il vous faut pour vous procurer les produits de Statistique Canada :

- descriptions de plus de 80 nouveaux titres et courts résumés des 800 titres et plus et des 11 séries de cartes déjà disponibles;
- premier aperçu des futurs produits du recensement de 1991;
- renseignements clairs pour passer les commandes afin d'éviter les délais;
- produits électroniques sur supports divers et conseils sur l'obtention d'aide d'experts pour les produits électroniques et les recherches en direct;
- systèmes d'onglets pour chaque section sur la couverture arrière — pour que vous puissiez immédiatement repérer les renseignements qui vous intéressent.

...maintes et maintes fois

Pour garantir que le Catalogue puisse résister à une utilisation fréquente, nous avons utilisé une couverture avec un revêtement spécial conçue pour éviter les dos cassés, les bords abîmés et les coins de page pliés.

Commandez aujourd'hui — vous ne pourrez plus vous passer de lui.

To those of you who need in-depth information about the labour market...

...Statistics Canada produces **Labour Force Annual Averages 1991** - a reference publication created specifically to meet those needs. With detailed data ... Quick-reference summaries and graphs ... Geographical breakdowns in unprecedented detail ... More variables and cross classifications than published in the monthly issues of *The Labour Force*.

The **Labour Force Annual Averages 1991** covers:

- an overview of changes that occurred in the service industries over the period 1976 to 1991;
- time loss and absenteeism by industry and province;
- full-time and part-time employment by industry and province;
- occupations for Census Metropolitan Areas (CMAs) and economic regions;
- industries for CMAs and economic regions;
- labour market participation and family responsibilities by provinces;
- and more.

Labour Force Annual Averages 1991. Part and parcel of Statistics Canada's customer-driven approach to business information.

Labour Force Annual Averages 1991 (catalogue number 71-220) is available for \$39 in Canada, US\$47 in the United States and US\$55 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6. Or contact the Statistics Canada Regional Reference Centre nearest you. (A list of centres appears in this publication.)

For faster service, FAX your order to 1-613-951-1584. Or call toll-free 1-800-267-6677 and use your VISA or MasterCard.

À ceux d'entre vous qui désirent obtenir de l'information plus détaillée sur le marché du travail...

...Statistique Canada présente **Moyennes annuelles de la population active 1991** - un document de référence créé spécialement à votre intention. Vous y trouverez des données détaillées, des sommaires et des graphiques faciles à consulter, des ventilations géographiques plus détaillées qu'auparavant et davantage de variables et de recoupements qu'il n'en paraît dans les numéros mensuels de *La population active*.

Moyennes annuelles de la population active 1991 porte sur:

- un aperçu des changements qui sont survenus dans le secteur des services au cours de la période 1976 à 1991;
- les heures perdues et l'absentéisme, ventilés par secteur d'activité et province;
- l'emploi à plein temps et à temps partiel, ventilé par secteur d'activité et province;
- les professions dans les régions métropolitaines et les régions économiques;
- les secteurs d'activité dans les régions métropolitaines et les régions économiques;
- la participation au marché du travail et les obligations familiales selon la province;
- et bien d'autres.

Moyennes annuelles de la population active 1991 est un pivot de l'approche de Statistique Canada qui vise à satisfaire les besoins de ses clients en matière d'information.

Moyennes annuelles de la population active 1991 (numéro 71-220 au catalogue) : est offert à 39 \$ au Canada, 47 \$ US aux États-Unis et 55 \$ US dans les autres pays.

Pour commander, prière d'écrire à l'adresse suivante : Vente des publications, Statistique Canada, Ottawa (Ontario) K1A 0T6, ou communiquer avec le centre régional de consultation de Statistique Canada le plus proche (liste des centres incluse dans la présente publication).

Pour accélérer le service, commander par télécopieur au 1-613-951-1584, ou composer sans frais le 1-800-267-6677 et utiliser la carte VISA ou MasterCard.

What happened to the cost of living last month?

The Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), **The Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- health and personal care
- food
- recreation, reading and education
- clothing
- tobacco products and alcoholic beverages
- housing

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of change.

Get the facts.

Subscribe to **The Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$93 in Canada, US\$112 in the United States and US\$130 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Qu'en était-il du coût de la vie le mois dernier ?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur:

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changement.

Abonnez-vous !

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 93 \$ au Canada, 112 \$ US aux États-Unis et 130 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).
